Comparing the effect of violet almond oil with almond oil and placebo in quality of sleep in patients with chronic insomnia

Protocol summary

Summary

Primary insomnia patients were detected by a neurologist based on the diagnostic criteria in DSM-V. The included patients were those whose illness had lasted at least three months and were willing to participate in a research project. The patients were referred to the Clinic of Traditional and Complementary Medicine in Mashhad University of Medical Sciences. After obtaining informed consent, they were randomly divided into three groups: A, B, C. The three groups received three drops of almond oil or violet-almond oil or placebo on each nostril every night. Since the treatment of chronic insomnia cares about sleep hygiene, due to moral considerations and lack of deprivation of treatment in the placebo group, sleep hygiene instructions were presented to all the three groups based on the guidelines of the American Association sleep (AASM). Before and after 30 days of treatment, Pittsburgh Sleep Quality Index, Insomnia Severity, was completed by all patients.

Health conditions studied

1

Description of health condition studied
chronic insomnia

ICD-10 code
F51.0

ICD-10 code description
Nonorganic insomnia

Primary outcomes

1

Description
sleep

Timepoint
Before the intervention and one month after intervention

Method of measurement
Pittsburgh questionnaire, Insomnia Severity Index questionnaire

Secondary outcomes

1

Description
Side effects

Timepoint
The end of study

Method of measurement
Questionnaire

Intervention groups

1

Description
In the first group of intervention, patients receive 3 drops of almond violet oil in each nostril every night before sleep for a duration of one month. Each drop contains 33 mg of the drug.

Category
Treatment - Drugs

2

Description
In the placebo group, patients receive 3 drops of placebo in each nostril every night before sleep for a duration of one month.Each drop contains 33 mg of the placebo.

Category
Placebo

3

Description
In the second group of intervention, patients receive 3 drops of sweet almond oil in each nostril every night before sleep for a duration of one month. Each drop contains 33 mg of the drug.

Category
Treatment - Drugs
