Study of the effect of Allopurinol on renal residual function in hyperuricemic peritoneal dialysis patients

Protocol summary

Study aim

Aim of this study is evaluation of Allopurinol on residual renal function in peritoneal dialysis patients.

Design

A randomised, blinded clinical trial with a parallel group without placebo use.

Settings and conduct

Peritoneal dialysis patients with hyperuricemia are divided in 2 groups. According to randomized numbers, they are divided to group with drug use and group without drug use. Nurse and investigator are blinded to drug use and patients are visited by physician.

Participants/Inclusion and exclusion criteria

49 patients arrived in study. Inclusion criteria are: peritoneal dialysis at least 3 months, uric acid level more than 7mg/dL in men and more than 6mg/dL in women and residual renal function more than 2cc/min. Exclusion criteria are death, change to hemodialysis, renal transplantation, drug allergy or complication of drug.

Intervention groups

They receive tablet allopurinol 100 mg manufactured by Jalinous company for 6 months and uric acid level and residual renal function are measured at beginning and the end of study. results compare with same patient without drug therapy.

Main outcome variables

determination of residual renal function after drug use.

Scientific title

Study of the effect of Allopurinol on renal residual function in hyperuricemic peritoneal dialysis patients

Public title

Effect of Allopurinol on renal residual function

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
consent for cooperation peritoneal dialysis for at least 3 months 18-80 years old hyperuricemia: uric acid level $\geq 7\text{mg/dL}$ in men and $\geq 6\text{mg/dL}$ in women minimum residual renal function : 2cc/min/m^2

Exclusion criteria:
death allopurional allergy or complications hemodialysis rout for dialysis renal transplantation nephrotoxic drug use

Age

From **18 years** old to **80 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor
- Data analyser

Sample size

Target sample size: **98**

Randomization (investigator's opinion)

Randomized

Randomization description

simple randomization, table of random numbers

Blinding (investigator's opinion)

Double blinded

Blinding description

participants, nurses and investigator are blinded in this study.

Placebo

Not used

Assignment

Parallel

Health conditions studied

1

Description of health condition studied

end stage renal disease

ICD-10 code

N18.0

ICD-10 code description

end stage renal disease

Primary outcomes

1

Description

serum uric acid level

Timepoint

before intervention and 6 months after drug use

Method of measurement

laboratory kit- ELISA- with HITACHI equipment

2

Description

residual renal function

Timepoint

before intervention and 6 months after drug use

Method of measurement

renal function formula

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Allopurinol tablet usage, 100mg daily orally for 6 months manufactured by Jalinous company

Category

Treatment - Drugs

2

Description

Control group: no drug use

Category

Placebo

Title and more details about the data/document

Primary outcome measure could be shared after termination of study.

When the data will become available and for how long

starting 1 year after publication

To whom data/document is available

Academic institution can apply to receive it

Under which criteria data/document could be used

using data for similar studies

From where data/document is obtainable

get documents by e-mail address to information provider

What processes are involved for a request to access data/document

After introduce and academic information, please explain your aim(s). they must committal to refer this study as reference if they use data. otherwise we entitle to follow these to Ethic committee.
