The effect of education based on extended parallel process model on weight and knowledge of women about overweight before pregnancy

Protocol summary

Summary

The purpose of this study is evaluating the effect of education based on extended parallel process model on weight and knowledge of women about overweight before pregnancy. Sample size is sixty women with BMI more than Twenty-five, referred to counseling pre-pregnancy to health centers in Mashhad. For Sampling, at first one center selected from the five main health centers and then two sub-centers selected by tables of random numbers, one center as intervention and other as control group. The intervention group received two sessions of group training (by Interval is two days) based on concepts of extended parallel process model. At the beginning of the study, individuals in both groups received a nutritional check list based on the instructions in the Ministry of Health's maternal and child nutrition booklet. They would have to complete it at home and were delivered to researcher two and four weeks after intervention. instruments for collecting Data were questionnaires included: demographic, knowledge, concepts of model including susceptibility, severity, self-efficacy and perceived response, anxiety, physical activity, body image, eating disorders, Social protection questionnaires, as well as meters and scales for measuring body mass index. Before, two and four weeks after the intervention, instruments used.

Scientific title

The effect of education based on extended parallel process model on weight and knowledge of women about overweight before pregnancy

Public title

Effect of theory-based training on weight and knowledge of women about overweight before pregnancy

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: women aged 18 to 49 years, consent to participate in the study, body mass index over than 25 and less than 40. Exclusion criteria: age under 18, not wanting to attend, absent in training sessions or complete checklist incompletely, chronic disease

Age

From **18 years** old to **49 years** old

Gender

Female

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **60**

Health conditions studied

1

Description of health condition studied

overweight

ICD-10 code

E66.9

ICD-10 code description

Obesity, unspecified

Primary outcomes

1

Description

knowledge

Timepoint

before training, after 2 weeks, 4 weeks after training

Method of measurement

Assessment by a questionnaire designed by researcher

2

Description

weight

Timepoint

before training, after 2 weeks, 4 weeks after training

Method of measurement

By weight scale

Secondary outcomes

1

Description

enxiety

Timepoint

before training, after 2 weeks, 4 weeks after training

Method of measurement

Spielberger Anxiety Inventory

2

Description

physical activity

Timepoint

before training, after 2 weeks, 4 weeks after training

Method of measurement

Baec phisical activity questionnaire

3

Description

Concepts of modell (sensitivity and Severity Perceived, Response Efficacy Perceived, Self Efficacy Perceived)

Timepoint

before training, after 2 weeks, 4 weeks after training

Method of measurement

Assessment by a questionnaire designed by researcher

4

Description

Social protection

Timepoint

before training

Method of measurement

Perceived Social Support - Family Scale (PSSFa)

5

Description

Eating disorders

Timepoint

before training

Method of measurement

Eating Disorder Examination Questionnaire (EDE-Q)

6

Description

Body image

Timepoint

before training

Method of measurement

Body figure rating scale questionnaire

Intervention groups

1

Description

In addition to standard care in health centers and use a check List for nutrition, two training sessions based on Extended Parallel Process Model

Category

Lifestyle

2

Description

In addition to standard care in health centers, use a check List for nutrition
