Comparison the effect of intra-articular injection of Bupivacaine and Morphine versus Bupivacaine and Methyl prednisolone on postoperative pain after knee surgery

Protocol summary

Summary

Objectives: The purpose of this study is to compare the effect of intra-articular injection of Bupivacaine and Morphine versus Bupivacaine and Methyl prednisolone on postoperative pain in patients who are candidate for repairing anterior cruciate ligament through an arthroscopic knee surgery. Design: Study carry out in a single blind manner, one centric clinical trial and by simple randomized method (Sealed Envelope and the selection of colorful cards) on 105 patients with 20 to 80 year's old, candidate for arthroscopic knee surgery in Rajaii hospital of Qazvin. Setting and conduct: Patients are randomly dividing into three groups (n= 35). In all patients Induction of anesthesia and route of surgery are the same Intervention: patients receive intra-articular injection of 8 ml bupivacaine 0.5 % with 5 mg morphine in group 1, 8 ml bupivacaine 0.5 % with 40 mg methylprednisolone in group 2, 8 cc bupivacaine 0.5 % with 1 ml distilled water in group 3 At the end of the surgery . Main outcome measures: Pain is assessed through visual analog scale (VAS) at 1, 2, 6, 12, 18 and 24 hours after the surgery. In addition, the amount of opioid consumption, and side effects of used drugs will evaluated during 24 hours after surgery and compared between the groups.

Health conditions studied

1

Description of health condition studied

pain in knee

ICD-10 code

M79.6

ICD-10 code description

Pain in limb

Primary outcomes

1

Description

postoperative pain

Timepoint

1, 2, 6, 12, 18 and 24 hours after surgery

Method of measurement

Score of pain in Visual analog scale (VAS)

2

Description

Opioid consumption

Timepoint

During 24 hours after operation

Method of measurement

Mg of Pethidine

Secondary outcomes

1

Description

Drug side effects

Timepoint

During 24 hrs after the surgery

Method of measurement

Asking the patient

Intervention groups

1

Description

At the end of the surgery in group 1: intra-articular injection of 8 ml bupivacaine 0.5 % with 5 mg morphine will be done
