Clinical trial comparison of the effect of low level and high level laser therapy (Ga-Al-Ar) and exercise therapy on the function and the pain of knee osteoarthritis

Protocol summary

Summary

The aim of this study is comparison the efficacy of gallium aluminum arsenide (Ga-Al-Ar) laser therapy (low level & high level) and exercise therapy on the function and pain of patients with grade 2 and 3 knee osteoarthritis. This study will be performed on 75 patients as a single center randomized of the phase 2-3 clinical trial and by simple randomized method (closed envelopes method and selecting color cards) in velayat hospital of Qazvin. Selected patients should have grade 2 and/or 3 osteoarthritis (OA). Kollgrn Lawreance system will be used to evaluate OA grading. The patients will be divided in to 3 groups; low level laser therapy (25 cases), high level laser therapy (25 cases) and exercise therapy (25 cases).The patients will be treated by laser therapy 3 times per week for 4 weeks (12 sessions). Outcome variable of knee pain intensity will be assessed before the treatment and during the first, second, third and forth weeks of treatment and also the first and forth weeks after the end of treatment by using laser and exercise therapies in each groups according to the visual analogue scales (VAS). Also, outcome variable of knee function will be assessed in a similar way according to the WOMAC questionnaire. The pain intensity will be assessed during the rest and activities.

Scientific title

Clinical trial comparison of the effect of low level and high level laser therapy (Ga-Al-Ar) and exercise therapy on the function and the pain of knee osteoarthritis

Public title

comparison the effect of laser and exercise on the function and the pain of knee osteoarthritis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Age more than 50; patient with grade 2 and 3 osteoarthritis
Exclusion criteria: Other knee joint disorder; Hip and/or foot osteoarthritis; serious systematic illness; Corticosteroid and Hyaluronic acid non-injection in knee joint during the past 6 months; knee effusion; knee surgery.

Age

From **50 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **75**

Health conditions studied

1

Description of health condition studied

knee osteoarthritis

ICD-10 code

M17.9

ICD-10 code description

Gonarthrosis, unspecified

Primary outcomes

1

Description

knee pain intensity

Timepoint

The pain intensity before the treatment and the first, second, third and fourth weeks and also the first and fourth weeks after treatment by laser and exercise

Method of measurement

In all three groups based on the visual analogue scales (VAS)

2

Description

knee function

Timepoint

knee function before the treatment and the first, second, third and fourth weeks and also the first and fourth weeks after treatment by laser and exercise

Method of measurement

WOMAC questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

In first group, low level of laser(Ga-Al-Ar) 3 times per week for 4 weeks (12 sessions)

Category

Treatment - Other

2

Description

In second group, low level of laser(Ga-Al-Ar) 3 times per week for 4 weeks (12 sessions)

Category

Treatment - Other

3

Description

the third group will be taught isometric and isotonic strengthening and stretching exercises for quadriceps and hamstring muscles by training bulletin and face to face training.
