The Study of the Impact of Self- Management Education on 7-12 years old children's Asthma Control

Protocol summary

Summary

The purpose of this study was to determine the effect of self-management on the number of referrals to emergency, absence from school and the 7-12 years old children's FEV1(Forced Expiratory Volume in One Second). This is a randomized clinical trial that would be done for 2 weeks on 60 children with Asthma in 1394-95. 7-12 years old children should not suffer from Asthma and systemic diseases and if they do not wish, they should not be studied. The sample would be randomly divided into control and experimental groups. For each child, FEV1(Forced Expiratory Volume in One Second) should be measured before and after 12 weeks. In the group under WAP(Written Action Program) based on the symptoms, the demographic information and Asthma control questionnaires would be distributed, and in the control group the same questionnaires would be distributed. The data would be collected after 12 weeks.

Scientific title

The Study of the Impact of Self- Management Education on 7-12 years old children's Asthma Control

Public title

Self- Management in Children 7-12 aged with Asthma

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion: A definitive diagnosis of Asthma by pulmonary specialist : ages 7 to 12 :The absence of serious systematic disease Exclusion: Unwillingness to cooperate during the investigation

Age

From **6 years** old to **11 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 60

Intervention groups

1

Description

Experimental (treatment) Group: For each child before treatment, FEV1 (Forced Expiratory Volume in One Second) would be measured using Spirometry. Then, the child would be asked to complete the demographic information and a written Action program (WAP) would be completed by the sensitivity and asthma specialist on the required orders in normal situation, before exercise and Asthma attack that the child will act upon it during the following three months. The questionnaire on asthma control would be completed by the child weekly for the 12 weeks and the number of referrals to emergency and the days of absence from school would be recorded in the questionnaire by the child and 12 weeks after treatment FEV1(Forced Expiratory Volume in One Second) would be re- measured using Spirometry
