Comparison of vascular heparin and non heparinated grafts patency in patients with Renal failure on dialysis

Protocol summary

Summary

This study aimed to compare the two types of grafts stay open heparinized and non- heparinized patients on dialysis occurs in the lower extremities. In this prospective study, during Shahrivar 1387 to Shahrivar 1394, a total of 80 dialysis patients referred to Imam Reza Kermanshah Hospital with an average age of 62 years randomly placed in two groups grafts were heparinized and non- heparinized, And for a year the amount based on the performance of dialysis grafts stay open meetings every 3 months during the study and were followed. patients a long time through Natural fistula or graft in the upper limb were on dialysis. And in this situation because of a breakdown there is another possibility for Hemodialysis. None of the patients included history of graft or fistula in the lower extremities. Patients were excluded in case of death , which occurred non case. Patients in the quarterly meetings and arterio-venous flow using Doppler ultrasonography and review the adequacy of the graft was evaluated in terms of openness. After one year , the results are compared in the two groups and the non- heparinized with heparin was investigated grafts

Scientific title

Comparison of vascular heparin and non heparinated grafts patency in patients with Renal failure on dialysis

Public title

comparison of heparin and non- heparinized grafts patency in Renal Failure dialysis pateints

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: dialysis patients that candidate to graft installation
Exclusion criteria: patient death

Age

No age limit

Gender

Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **80**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Double blinded

Health conditions studied

1

Description of health condition studied

Chronic Renal Failure

ICD-10 code

N18,N18.1,

ICD-10 code description

Chronic Kidney Disease

Primary outcomes

1

Description

Graft Ptency

Timepoint

3th, 6th, 9th and 12th month after graft installation

Method of measurement

doppler ultra sonography

Secondary outcomes

empty

Intervention groups

1

Description

Non- heparinized grafts is embedded in the control group during the year on dialysis grafts stay open properly assessed every 3 months

Category

Treatment - Surgery

2

Description

For the intervention group, graft patency rate with heparin is embedded in every 3 months during the year is investigated

Category

Treatment - Surgery
