Evaluation of the relationship between End to End anastomotic urethroplasty and erectile dysfunction in the patients with urethral stricture referred to Shohada E Tajrish Hospital during 2014-2017: Single blind randomized clinical trial

Protocol summary

Summary

This study will be performed to evaluate the effect of end to end anastomotic urethroplasty on the sexual function in patients with urethral stricture. Inclusion criteria are consisted of: patients in active sexual age, patients with ability to follow up and candidate for this surgical procedure based on history, physical examination and radiographic and flexible cystoscopy findings. Exclusion criteria are consisted of: patients which will not have cooperation for follow up during performing the project, patients with endocrine disorders (Diabetes Mellitus, Thyroid dysfunction and dyslipidemia) and patients with hormonal disorders (such as testosterone and prolactin disorders). Population study are patients will undergo end to end anastomotic urethroplasty. Sampling is convenient and sample size will be 70 patients. All of patients will be undergo end to end urethroplasty in Shohada E Tajrish Hospital in Tehran during January 2016 till December 2017. Complete history, physical examination and complete laboratory data for sexual function will be fulfilled by questionnaire and patients checked by sexual function test questionnaire and color Doppler sonography of penile arteries before, 3 months and 6 months after surgery. Outcomes including radiographic findings to evaluate the pelvis fracture, site of urethral injury and perioperative bleeding, sexual function and color Doppler sonography of penile arteries will be measured.
