

Clinical Trial Protocol

Iranian Registry of Clinical Trials

02 Aug 2026

The effect of group cognitive behavioral counseling on the self-efficacy and self-perception among methadone maintenance treatment clients.

Protocol summary

Summary

The present study is a randomized clinical trial (RCT). Convenience sampling conducts among clients who refer to public and private clinics of addiction treatment in Rasht city, Iran. After random selection, samples will be divided into two groups including case (intervention) group and control group and these groups will adjusted based on the demographic variables. Then, participants in case group, beside routine interventions that conduct in clinics, will attend in the cognitive behavioral group consulting sessions. Moreover, routine interventions of clinic will be done in control group. Group consulting will be hold by attending maximum number of 12 to 15 clients in each group for six sessions and one session per week that takes about 50 to 70 minutes. Before starting interventions, clients in both groups will complete the self-efficacy scale questionnaire of Bramson and self-perception scale questionnaire of Dr. Poorhouse. Moreover, 4 weeks after the last consulting session for each group, questionnaire will be filled by clients of both groups again.
