The effects of cryotherapy and cryostretch on clinical and functional outcomes in athletes with acute hamstring muscle strain

Protocol summary

Summary

(1) Objectives: The aim of the present study is compare the effects of cryostretching and cryotherapy on pain, range of motion and functional status in athletes with acute hamstring muscle strain.(2) Design: This is a randomized clinical trial on 37 athletes with acute hamstring muscle strain which will be divided to two groups (cryotherapy and cryostretch group) randomly. The patients will not aware about her/his group. (3) Setting and conduct: a) The patients will be divided to two groups randomly. Both treatment regimens will be augmented by a daily home treatment program for five consecutive days. In the cryotherapy group ice bag will wrap around injured location for 20 minutes in prone position. In cryostretch group, participants will perform static stretch of hamstring muscle hold for 30 seconds after 20 minutes cold application. Pain will be measured based on visual analog scale (VAS), knee range of motion during active and passive knee extension test will be measured using inclinometer and functional status will be measured using the Persian version of Lower Extremity Functional Scale (LEFS). Pre-treatment and post-treatment assessments will be performed on day 1 and day 6. The variables will be compared between groups. (4) Participants: Athletes with acute hamstring strain. Inclusion criteria: Elite male or female athlete between 18-40 years; Athletes with acute first or second degree strain of hamstring; Participants will be visited in sports physical therapy clinic within 72 hours after injury; Participants have no hypersensitivity or cold intolerance; No history of lower limb injury such as fracture or injury that required surgery within the past 6 months ;Participants agree not to take NSAID medication during the study. Exclusion criteria: If the patient dose not complete the treatment program and missing the sessions. The patient will stop his/her program any time he/she wants.(5) Intervention: Cryotherapy and cryostretch for 5 sessions.(6) Variables: The main variables are pain, active and passive knee extension

ROM and functional status.

Scientific title
The effects of cryotherapy and cryostretch on clinical and functional outcomes in athletes with acute hamstring muscle strain

Public title
The effect of stretching exercise and cryotherapy in hamstring strain management

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria: The athletes participate in sports activity for at least two years and three times per week for a minimum of 2 hours each time! Male or female athlete between 18-40 years old! Athletes with acute first or second degree strain of hamstring; Pain evoked by resisted prone knee flexion and passive tension testing using! Participants are visited in sports physical therapy clinic within 72 hours after injury! Participants had no hypersensitivity or cold intolerance! participant had no sign of complete muscle disruption! no history of lower limb injury such as fracture or injury that required surgery within the past 6 months! No history of malignant or neurologic disease! No clinical finding showing radiculopathy! No hip flexor muscle shortness (as diagnose by Thomas test)! Participants agree not to take NSAID medication or receive any other form of treatment during the study. Exclusion criteria: If the patient dose not complete the treatment program and missing the sessions. The patient will stop his/her program any time he/she wants.

Age
From **18 years** old to **40 years** old

Gender
Both

Phase

Health conditions studied

1

Description of health condition studied

muscle strain

ICD-10 code

M62.6

ICD-10 code description

Muscle strain

Primary outcomes

1

Description

Pain

Timepoint

On day 1 (before first treatment session) and day 6 (after fifth treatment session)

Method of measurement

Visual Analog Scale (VAS)

2

Description

Active and passive knee extension range of motion

Timepoint

On day 1 (before first treatment session) and day 6 (after fifth treatment session)

Method of measurement

Knee extension test using inclinometer

3

Description

Functional status level

Timepoint

on day 1 (before first treatment session) and day 6 (after fifth treatment session)

Method of measurement

Lower Extremity Functional Scale (LEFS)

Secondary outcomes

1

Description

Timepoint

Method of measurement

Intervention groups

1

Description

Superficial cooling by ice bag composed of crushed ice for intervention group(cryotherapy) 2

Category

Rehabilitation

2

Description

Static stretching exercise of hamstring for intervention group(cryostretch) 1

Category

Rehabilitation
