Comparative investigating of the effect of morning and evening walking on the night sleep quality of elderly Rafsanjan 2015

Protocol summary

Summary

The aim of this study is to compare the effect of morning and evening walking on the quality of sleep of elderly people of Rafsanjan . The research population includes the old people (above 60 years) that refer to urban health centers. If these people based on the Pittsburgh Sleep Quality Index score of 5 or more will receive 5 are enrolled. The sample size is 25 in each group that is chosen based on the previous studies . Participants in this study will be based on randomly divided into two groups. The first group walking in the morning for 4 weeks, followed by a 4 week washout period will be four weeks afternoon walk. The second group at the same time, walking in the evening for 4 weeks, followed by a 4 week washout period will be four weeks morning walk. Interventions in each group will be 12 weeks. Walking program, including a 5-3 minute warm up, 30 minute walk and is a 5-3 minute cool-down. Sleep quality questionnaire will be completed before and after intervention in both groups and data will be recorded.
