Comparison of Acacia Arabica as an adjuvant therapy with placebo in healing of the distal radius bone fracture

Protocol summary

Summary

This is an interventional study that evaluates the effect of oral Arabic Gum compared with placebo on the union fractures of the distal radius bone. The focus group includes adults with age 20-60 consciously selected and randomly divided into intervention and control groups. Besides conventional orthopedic treatment (replacement and fixation by plaster) for each patient, the supplement and placebo will be prescribed at the 8th day after the fracture for a duration of 21 days. The intervention group will take Arabic Gum powder and the control group will take dried bread powder as placebo. Radiologic Union Score System (callus formation and disappearance of fracture line) will be evaluated in both intervention and control groups in the third, fourth and sixth weeks after the fracture by two orthopedic specialists. Simple plain and lateral wrist x ray roentgenography are the choice Radio-graphic tests. Clinical criteria for healing based on Numeric Rating Scale System (hyperalgesia and active and passive wrist movement quality) will be evaluated at the sixth week (at the time of opening of plaster).

Scientific title

Comparison of Acacia Arabica as an adjuvant therapy with placebo in healing of the distal radius bone fracture

Public title

The effect of Arabic gum on radius fracture

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Distal radius bone fractures with displacement (type A of AO Classification) Exclusion criteria: partial or complete intra-articular fractures. (Type B and C category AO); multi-piece fractures (Type

C classification AO); fractures with internal or external fixation management criteria; Bilateral fractures or presence of fractures in the other bones (except distal radius and ulnar); initiation of treatment 24 hours or more after the fracture; association of vascular or nervous complications; Multiple Trauma; open fracture; History of previous fracture in the same position; fracture with dislocation of the wrist bones; pathological fractures; Chronic diseases such as diabetes, cancer, auto immune diseases, inflammatory kidney diseases, coronary heart diseases or advanced pulmonary diseases; decreased consciousness; pregnancy or lactation; alcohol addiction; tobacco or drug addiction; allergies to herbal medicines.

Age

From **20 years** old to **60 years** old

Health conditions studied

1

Description of health condition studied

Distal fracture of radius bone

ICD-10 code

S52.5

ICD-10 code description

Fracture of lower end of radius

Primary outcomes

1

Description

Callus formation and disappearance of fracture line

Timepoint

Week 3 and 4 and 6

Method of measurement

radiography

Secondary outcomes

1

Description

Pain assessment at the touch position and active/passive movement of fractured wrist

Timepoint

At the end of the sixth week after the opening of plaster

Method of measurement

Numeric Rating 11-point scale

Intervention groups

1

Description

Intervention group: replacement + plaster + follow-up radiographies and visits by Orthopedist + 500 mg Arabic Gum capsule twice daily (at the morning and evening) for 21 days duration.

Category

Treatment - Drugs

2

Description

Control group: replacement + plaster + follow-up radiographies and visits by Orthopedist + 500 mg dried bread powder capsule twice daily (at the morning and evening) for 21 days duration.

Category

Placebo
