Clinical trial of efficacy comparison of intranasal desmopressin vs.intravenous ketorolac in patients with renal colic referring to emergency department

Protocol summary

Summary

(1) Objectives: Comparison of intranasal desmopressin and Intravenous Ketorolac for pain management in renal colic patients (2) Design: Double-blind randomized clinical trial (3) Setting and conduct: 40 patients randomly divided to 2 groups. One group receiving intranasal desmopressin and intravenous normal saline and in other group, intravenous ketorolac and intranasal normal saline was administered. (4) Participants: 16-50 years old patients with renal colic referring to emergency department without history of sensitivity to desmopressin and ketorolac, history of cardiac disease, hypertension, pregnancy and breast feeding, analgesic consumption within 4 hours of admission (5) Intervention: 40 micro grams intranasal desmopressin and 1cc intravenous normal saline have been given to desmopressin group and 30mg intravenous ketorolac and 4 puffs of nasal normal saline was given to ketorolac group. (6) Main outcome measures: Pain score was assessed with visual analogue scale prior to drug administration and 10, 30 and 60 minutes after that

Scientific title

Clinical trial of efficacy comparison of intranasal desmopressin vs.intravenous ketorolac in patients with renal colic referring to emergency department

Public title

Desmopressin effect on pain management of kidney stone

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Patients with impression of renal colic; 16-50 years old Exclusion criteria:History of sensitivity to

desmopressin and ketorolac; history of cardiac disease; hypertension; analgesic consumption within 4 hours of admission; pregnancy; breast feeding; hepatic or renal failure

Age

From **16 years** old to **50 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Double blinded

Health conditions studied

1

Description of health condition studied

Renal colic

ICD-10 code

N23

ICD-10 code description

Unspecified renal colic

Primary outcomes

1

Description

Pain

Timepoint

Before intervention, 10,30,60 minutes after intervention

Method of measurement

Pain score based on visual analogue scale

Secondary outcomes

1

Description

Side effects

Timepoint

from starting drug administration until 1 hours after

Method of measurement

Serial physical exam

Intervention groups

1

Description

Intervention group: 40 micro grams intranasal desmopressin and 1 cc intravenous normal saline were administered once.

Category

Treatment - Drugs

2

Description

Control group: 30mg IV ketorolac and 4 puff of intranasal normal saline were administered once.

Category

Treatment - Drugs
