Scientific title

Comparison of clinical outcomes of two methods of casting and bandaging in the treatment of fractures without displacement of distal radius

Public title

Casts and bandages in fractures without displacement of the distal radius

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: patients Patients with extra-articular distal radius fractures. Exclusion criteria: lack of cooperation.

Age

From **18 years** old to **70 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: 60

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

Randomization will be done by using a random number table.

Health conditions studied

1

Description of health condition studied

undisplaced distal radius fractures

ICD-10 code

S52.6

ICD-10 code description

Fracture of lower end of both ulna and radius

Primary outcomes

1

Description

Amount of inability

Timepoint

Before the intervention, three weeks after intervention and 6 weeks after the intervention.

Method of measurement

According to DASH score

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: casting

Category

Rehabilitation

2

Description

Intervention group: bandaging
