Assessment the effect of midwife- led group consulting on parent 's practice and self- efficacy in prevention of sexual abuse among 2-6 years old children

Protocol summary

Summary

The two-group randomized control trial study, which aimed to evaluate the effectiveness of midwife- led group consulting on parent 's practice and self- efficacy in prevention of sexual abuse among 2-6 years old children. The study population will comprise parents by 2-6 years old children. A sample of 62 parents who met the inclusion criteria has been calculated. Inclusion criteria with block randomization placed in one of intervention and control groups. The intervention group perceive 3 weekly sessions of group counseling. Before and after the intervention and 1month after the last sessions, the parent 's practice and self- efficacy to be measured by questionnaire
