A Comparison between the effects of Dexmedetomidine and Morphine used by patient-controlled anesthesia pump Method on controlling the side effects of Post-operative coronary bypass surgery in intensive care unit at Bushehr heart center in 1394 to 1395

Protocol summary

Summary

Objective of the study: To compare the effects of two analgesics, Dexmedetomidine and Morphine used by patient-controlled anesthesia pump on the side effects of post operative coronary bypass surgery in Intensive Care Unit of Bushehr heart center in 2016 to 2017. This is a randomized, single-blinded trial containing interventional and control groups. Methodology: The population is composed of 80 patients between the ages of 40 to 80 years who will be grouped into two groups of A and B. Inclusion criteria: Ejection fraction percentage less than 35 %; Patients with informed refusal after the explanation of the procedures; Patients who need reoperation in the first 24 hours after the surgery; Drug Addiction. Intervention: after randomization, Patients in group A(interventional group) will be subjected to patient-controlled Anesthesia pump containing 100 cc Normal Saline + 200 micro gram Dexmedetomidine + 4 mili gram Ondansetron with the rate of 0.7 micro gram per kilo gram per hour and group B (control) patients will be subjected to patient-controlled Anesthesia pump containing 10 miligram Morphine + 4miligram Ondansetron with the rate of 0.015 miligram per kilo gram per hour. This study will be performed from 03/04/2016 to 19/03/2017. Outcomes which will be measured and compared in this study between the groups are: severity of the pain, changes of Hemodynamic parameters, the amount of required Narcotic analgesias, the frequency of nausea and vomiting and also the level of sedation.

Scientific title

A Comparison between the effects of Dexmedetomidine and Morphine used by patient-controlled anesthesia pump Method on controlling the side effects of Post-operative coronary bypass surgery in intensive care unit at Bushehr heart center in 1394 to 1395

2016-04-03, 1395/01/15

Ethics committee reference number
IR.BPUMS.rec.13940107

Public title

Comparing Dexmedetomidine and Morphine used Patient-Controlled Analgesia pump Method on controlling the side effects of Cardiac Surgery

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: Patients undergoing elective coronary artery bypass graft surgery. Exclusion criteria: Ejection fraction percentage less than 35 %; patients who need reoperation in the first 24 hours after the surgery; Drug Addiction; Patients with informed refusal after the explanation of the procedures.

Age

From **40 years** old to **80 years** old

Description of health condition studied

general anesthesia

ICD-10 code

Y48.4

ICD-10 code description

Anaesthetic, unspecified

2

Description of health condition studied

cardiac surgery

ICD-10 code

T81.9

ICD-10 code description

Unspecified complication of procedure

Primary outcomes

1

Description

The intensity of analgesia

Timepoint

First 24 hours after surgery

Method of measurement

Visual analogue scale

2

Description

Systolic blood pressure

Timepoint

First 24 hours after surgery

Method of measurement

In millimeters of mercury using mercury manometer

3

Description

Diastolic blood pressure

Timepoint

First 24 hours after surgery

Method of measurement

In millimeters of mercury using mercury manometer

4

Description

Mean arterial pressure

Timepoint

First 24 hours after surgery

Method of measurement

(twice systolic blood pressure+diastolic blood pressure in millimeters of mercury and by mercury barometer)

Divided by 2

Secondary outcomes

1

Description

Sedation level

Timepoint

First 24 hours after surgery

Method of measurement

By Ramsay sedation scale

2

Description

Heart rate

Timepoint

First 24 hours after surgery

Method of measurement

Measuring the radial pulse by palpation in one minute

3

Description

Nausea and Vomiting

Timepoint

First 24 hours after surgery

Method of measurement

Patient's self complaining

Intervention groups

1

Description

Intervention group: Dexmedetomidine 200 micro gram in 100 cc Normal Saline plus 4 mg Ondansetron in Patient-Controlled Anesthesia pump with infusion rate of 0.7 micro gram per kilogram per hour in the first 24 hours after the surgery

Category

Treatment - Drugs

2

Description

Control group: Morphine 10 milligram with 4 mg Ondansetron into pump with infusion rate of 0.015 micro gram per kilogram per hour in the first 24 hours after the surgery

Category

Treatment - Drugs
