Clinical trial of effect of intradermal injection of MMR vaccine in treatment of Palmoplantar warts in patients unresponsive to treatment

Protocol summary

Summary

This single blind clinical trial will be performed on patients with Palmoplantar warts referred to Bou-Ali Sina Hospital of Sari in 2016. Patients are divided into two groups of intervention and control using random numbers. for the intervention group, intralesional injection of MMR vaccine made by Razi institute and for the control group intralesional injection of normal saline made by the same institute is performed. Dose of the drug in the control group is 0.3mL and in MMR group it is determined based on positive reaction diameter. Diameter reaction less than 20mm receives 0.3mL MMR, diameter of 20-40mm receives 0.2mL and diameter >40mm receives 0.1mL MMR vaccine. Injections are done with an interval of 2 weeks for up to 5 injections. During each session, photographs of lesions are taken and response to treatment is compared with the previous session.
