The effect of topical piperine combined with narrow band UVB on vitiligo treatment: A clinical trial study

Protocol summary

Summary

Objectives: To compare the effect of topical piperine combined with narrow band UVB on vitiligo treatment with narrow band UVB alone. **Design:** Double-blind randomized clinical trial **Setting and conduct:** In this double-blind randomized clinical trial, patients with vitiligo in the facial region referring to Loghman Hakim and Shohada-e-Tajrish hospitals during 2014 to 2016 were invited for participation. Included subjects will be randomly assigned to the two treatment and placebo groups. **Participants:** Inclusion criteria included patients with facial vitiligo. The exclusion criteria were as follows: a history of an autoimmune disease such as alopecia areata, diabetes, Addison's disease, pernicious anemia, Graves' disease, Hashimoto's thyroiditis, systemic lupus erythematosus, and a history of treatment with NB-UVB in the last two weeks, or a history of the use of topical medications for at least 2 weeks prior to the study. Accordingly, a total of 63 patients were selected as the sample population for this study and randomly assigned to two groups of placebo (28 subjects) and piperine (35 subjects). **Intervention:** The case and control groups participated in this study will be treated by topical piperine and placebo respectively for three months. It is worth noting that the standard phototherapy treatment (NB-UVB) will be given in both groups during this time. Piperine solution (1%) will be prepared by dissolving the piperine (with 95% purity, provided from Bioprex Co., India) in a solvent mixture [dimethyl sulfoxide (DMSO): isopropyl alcohol and glycerol] (20: 80). Patients in both groups will undergo NB-UVB phototherapy by Waldman UV 7001 German device for three months, every other day. The energy of the device will be set on 0.05 Joules at the first session and 0.05 Joules will be added to each session to attain a maximum level of 2 Joules and then this energy will be kept constant for further procedure. **Main outcome measure:** The level of repigmentation scored on a scale of 0 to 100 by the subjects along with two blinded dermatologists will be the main outcome

measure. Score 0 means full depigmentation, and 100 is equal to normal skin. Evaluations will be conducted at one, two and three months.

Scientific title
The effect of topical piperine combined with narrow band UVB on vitiligo treatment: A clinical trial study

Public title
Combination therapy in vitiligo

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria: diagnosis of facial vitiligo Exclusion criteria: history of alopecia areata; diabetes; Addison's disease; pernicious anemia; Graves disease; Hashimoto's thyroiditis; systemic lupus erythematosus; history of treatment with NB-UVB in the past two weeks; history of applying topical medications in the past 2 weeks prior to the study

Age
No age limit

Gender
Both

Phase
2-3

Groups that have been masked
No information

Sample size
Target sample size: **30**

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Vitiligo

ICD-10 code

L80

ICD-10 code description

Vitiligo

Primary outcomes

1

Description

Repigmentation

Timepoint

Every month

Method of measurement

Objective evaluation by two blinded Dermatologists

Secondary outcomes

1

Description

Patients satisfaction

Timepoint

After four months

Method of measurement

Objective score given by the patient on a scale of 0-10

2

Description

Side effects of the treatment

Timepoint

Every month

Method of measurement

History taking and physical examination

Intervention groups

1

Description

Treatment with NBUVB plus a topical ointment as the placebo

Category

Placebo

2

Description

Treatment with NBUVB plus local application of Piperine

solition
Category
Treatment - Drugs
