investigation of effectiveness and non effectiveness of melatonin in sleep quality in patients with

Protocol summary

Summary

This study will be done with aim to investigate the effectiveness of melatonin on sleep quality in patients with cancer. This study is a not blinded clinical trial. The study population included patients with cancer who referred to Imam Reza Hospital in Kermanshah city. 44 patients in available method will be selected and will be assigned in the intervention group. Before the intervention, the Pittsburgh Sleep quality questionnaire will be completed in all patients. Then the patients of the study will receive 3 mg of melatonin daily for 1 month. Patients will be visited every week. At the end of the study the Pittsburgh Sleep quality questionnaire will be completed and the complications and problems associated with sleep medications will be compared with the initial results. Inclusion criteria: age between 16 to 80; Cancer patients who have trouble sleeping and chemotherapy have done for them and ended Exclusion criteria: patients with underlying disorders and uncontrolled medical problems such as diabetes; hypertension; seizures; addiction
