

Clinical Trial Protocol

Iranian Registry of Clinical Trials

25 Jun 2026

Comparison of laparoscopic salpingectomy effect on ovarian reserve versus laparoscopic salpingostomy.

Protocol summary

Summary

This study is a quasi-experimental study which will not be randomized. A total of 126 patients with tubal ectopic pregnancy who will refer to Arash hospital between the ages of 18 and 40 and will be in need of laparoscopic surgery will be involved in this study. The purpose of this study is to determine the effects of laparoscopic salpingectomy on ovarian reserve in comparison to laparoscopic salpingostomy. All Patients who want to use oral contraceptives and smoker women and patients with previous infertility or prior pelvic pathology will be excluded. Ovarian reserve is evaluated by serum AMH level before and three months after surgery. Ovarian reserve is evaluated by measurement of AMH level before and three months after surgery.

Scientific title

Comparison of laparoscopic salpingectomy effect on ovarian reserve versus laparoscopic salpingostomy.

Public title

Comparison of ovarian reserve in laparoscopic surgery with and without tubal preservation.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: All patients with tubal ectopic pregnancy who are in need of laparoscopic surgery and come to Arash hospital; aged between 18-40 years old
Exclusion criteria: smokers; patients with gynecologic disorders that affect ovarian function such as endometriosis, previous ovarian or tubal surgeries; history of infertility treatment; and patients who wanted to use oral contraceptives after surgery

Age

From **18 years** old to **40 years** old

Gender

Female

Health conditions studied

1

Description of health condition studied

Tubal ectopic pregnancy

ICD-10 code

O00.1

ICD-10 code description

Tubal pregnancy

Primary outcomes

1

Description

ovarian reserve

Timepoint

before and three months after surgery

Method of measurement

blood sampling

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group:In this group we measure AMH level before and three months after laparoscopic salpingectomy.

Category

Treatment - Surgery

2

Description

control group:In this group we measure AMH level before and three months after laparoscopic salpingosctomy.

Category

Treatment - Surgery
