The investigating of the prophylactic effect of Manna of Cotoneaster in neonatal jaundice

Protocol summary

Study aim

The purpose of this study is the investigating of prophylactic effect of Manna of Cotoneaster in management of neonatal hyperbilirubinemia. This study was performed on 444 neonate patients, who admitted into the rooming in Imam Khomeini Hospital, Sari, Iran. Informed consent will be obtained from mothers

Design

Randomization: using blocking method.

Settings and conduct

This study was performed on 444 neonate patients, who admitted into rooming in ward Imam Khomeini Hospital, Sari, Iran. Informed consent will be obtained from mothers. The Blind: To double-blind study, Manna of cotoneaster solution and placebo solution container similar appearance (provided by the laboratory of Sari Pharmacy Faculty) and the user, administer and appraiser of them do not know about it. After administration of cotoneaster, all neonate will assess by one neonatologist.

Participants/Inclusion and exclusion criteria

Inclusion criteria: All healthy neonate with breastfeeding are examined by doctor and weight is between 2.5 to 4 kg. Exclusion criteria: Babies with a genetic anomaly, Congenital, Intrauterine infection or jaundice within 24 hours of birth and mothers who are not satisfied and want to be excluded

Intervention groups

Intervention group: The amount of 1 g of cotoneaster per day is divided into 3 doses for 3 days. Control group: The neonate will receive placebo. The number of placebo drops per day is similar to the number of cotoneaster drops.

Main outcome variables

The bilirubin concentration measured in 3 sets (24 hours 48 hours and 72 hours after birth) and its number is recorded. The Meconium departure time controlled daily for three days after birth. The baby bilirubin concentration measured through the skin by bilirubin

test device. Then on the third day that neonatal follow up examination will be done, bilirubin concentration measured through the skin with the same device.

Scientific title

The investigating of the prophylactic effect of Manna of Cotoneaster in neonatal jaundice

Public title

Preventive effect of droplets on infant's jaundice

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Full-term baby (with gestational age 38-42 weeks) Birth weight 2.5-4 kg No postpartum complications Breastfeeding within the hour of birth Availability of parents for follow-up purposes PO tolerance by the infant (no nausea, vomiting or obstructive symptoms The absence of meconium contamination No need for CPR at birth No labor trauma

Exclusion criteria:

Genetic and congenital abnormalities or intrauterine infections Jaundice within the first 24 hours of birth ABO or Rh incompatibility Presence of neonatal hemolytic process Neonates with bleeding and cephalohematoma Self-administration of Cotoneaster

AgeFrom **1 day** old to **14 days** old**Gender**

Health conditions studied**1****Description of health condition studied**

Neonatal jaundice

ICD-10 code

p59.9

ICD-10 code description

neonatal jaundice

Primary outcomes**1****Description**

Added at 2017-06-11: Baby serum total bilirubin

Timepoint

Added at 2017-06-11: Every 24 hours for 3 days

Method of measurement

Added at 2017-06-11: Using a bilirubin test device (if a bilirubin is high, a bilirubin serum test will be performed based on the weight and age curve)

Secondary outcomes**1****Description**

Require hospitalization and Length of hospitalization days

Timepoint

From discharge to 14 days after birth

Method of measurement

Follow up by phone from the baby's parents

2

Description

Added at 2017-06-18: Evaluation of side effects in case of Cotoneaster

Timepoint

Added at 2017-06-18: Every 24 hours for 3 days

Method of measurement

Added at 2017-06-18: Observation and complete check list

Intervention groups

1

Description

Intervention group: The amount of 1 g of cotoneaster per day is divided into 3 doses for 3 days.

Category

Treatment - Drugs

2

Description

Control group: The neonate will receive placebo. The number of placebo drops per day is similar to the number of cotoneaster drops

Title and more details about the data/document

All information will be published in an article. Details of the data are available at the request of the journal publisher and upon obtaining permission from the corresponding author.

When the data will become available and for how long

Data is available as an article as soon as the article is published with permission from the corresponding author.

To whom data/document is available

The data is provided as an article by the journal, and those who have access to the journal can use the data contained in the article, with the permission of the corresponding author.

Under which criteria data/document could be used

The article's data is available in case of publication and is obtained by permission from the corresponding author.

From where data/document is obtainable

The data is available to the journal and is accessible by obtaining permission from the corresponding author.

What processes are involved for a request to access data/document

Data is available from the journal after publication of the article.
