Effect of flaxseed consumption on inflammation and vascular endothelial function markers in coronary artery disease patients

Protocol summary

Summary

Objective: To examine the effect of flaxseed consumption on inflammation and vascular endothelial function markers in patients with coronary artery disease
Design: This study is a single center, not blinded, randomized clinical trial with two parallel groups in third phase. In this study, 60 non smoker patients with coronary artery disease referred for angioplasty in Rajaei hospital, will be randomized into two groups, flaxseed (30 gram of flaxseed per day) or placebo (1 gram of wheat fiber) for 3 months. Vascular endothelial function will be evaluated through measurement of flow mediated dilatation (FMD) in brachial artery via ultrasound sonography. Fasting blood sample will be taken at the baseline and the end of study to measure plasma level of C-reactive protein and inflammatory cytokines.

Scientific title

Effect of flaxseed consumption on inflammation and vascular endothelial function markers in coronary artery disease patients

Public title

Effect of flaxseed in patients with heart disease

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion Criteria: 1) coronary artery disease patients (more than 50% blockage in coronary arteries) needed angioplasty with stent 2) willing to participation in the study Exclusion Criteria: 1) cigarette Smoking 2) continuous consumption of any antioxidant supplement such as vitamin E, vitamin C and Selenium in last month 3) consumption of flaxseed or any omega-3 supplement at the beginning of the study 4) advanced renal disease 5) unwillingness to continuance 6) any change in disease treatment plan such as change in type and dose of lipid

lowering drugs or surgical operation

Age

From **20 years** old to **75 years** old

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **60**

Health conditions studied

1

Description of health condition studied

Coronary heart disease

ICD-10 code

I25.1

ICD-10 code description

Atherosclerotic heart disease

Primary outcomes

1

Description

Flow Mediated Dilatation (FMD)

Timepoint

Baseline and the end of the study

Method of measurement

Ultrasound Sonography

Secondary outcomes

1

Description

Blood inflammatory cytokines

Timepoint

At baseline and the end of the study

Method of measurement

ELISA

Intervention groups

1

Description

Control: Daily consumption of one capsule containing 1 gr wheat fiber for 3 months

Category

Lifestyle

2

Description

Intervention: Daily consumption of 30 gr flaxseed for 3 months
