

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Jul 2026

Effect of education based on the theory of planned behavior on supplementation of their fewer than two years children.

Protocol summary

Summary

The aim of this study is to evaluate the effect of educational intervention based on theory of planned behavior on mothers supplementation, of their under two-years children. In this randomized controlled trial, from 251 mothers with children under two years who had referred to the health centers of Mashhad, 70 Mothers were chosen with multi-stage cluster sampling and randomly divided into either experimental or control group.(35 in trial group and 35 in control group). The instructional sessions were carried out applying modified methods of the theory of planned behavior structure (attitudes, subjective norms,perceived behavioral control, intention and behavior). Inclusion criteria : Willingness to participate in research; Having children under two years. Exclusion criteria: Feeding children with infant formula more than 500 ml per day ;Whether the child has anemi ;Contraindications vitamins and iron in children; The absence of a training session. Main outcome measure: weekly dose number of supplementation (iron-vitamin). Data: weekly dose number of supplementation (iron-vitamin), health literacy and growth disorders in children, were analyzed during the three periods: before, immediately and three month after the intervension.

Health conditions studied**1****Description of health condition studied**

Supplementation

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Mothers' knowledge about supplementation

Timepoint

Before and three months after intervention

Method of measurement

The questionnaire was created by the researcher

Secondary outcomes**1****Description**

Frequency of supplementation(iron-vitamin) for children

Timepoint

before, immediately and three month after the intervension

Method of measurement

The questionnaire was created by the researcher

2**Description**

social cognitive theory constructs(attitudes, subjective norms,perceived behavioral control, intention and behavior)

Timepoint

before, immediately and three month after the intervension.

Method of measurement

The questionnaire based on theory of plane behavior, was created by the researcher

3**Description**

Mothers health literacy.

Timepoint

before, immediately and three month after the intervension.

Method of measurement

Test of Functional Health Literacy in Adults

Intervention groups**1****Description**

The implementation of three training sessions on supplementation(a total of 180 minutes)based on theory of plane behavior.
