The effect of multi-modal education on anxiety in patients undergoing coronary angiography

Protocol summary

Summary

The aim of this study is to determine the effect of multi-modal education on anxiety in patients undergoing coronary angiography. This study is double-blind clinical trial with a sample size of 120 patients undergoing coronary angiography referred to educational and treatment centers in Urmia, which were selected by a convenience sampling method and are divided into one of three intervention groups (30) or control group (30). Random assignment of subjects will be, through the 120 number written on a small slip of paper located within an envelope and Specified that number between 1-30 to the control group, 31-60 to the peer education, 61-90 to the video education group, 91-120 to multi-modal education group is assigned. The day before angiography after informed consent by patients and a random selection of numbers in the envelope and allocation of patients to the target group, spielberger anxiety questionnaire and demographic characteristics will be completed. In a Peer education group, the experiences of two people who have been angiography at the center is used to reduce patients anxiety. In video-traning group educational videos of real environment angiography of the center is displayed. In multi-modal education group Measures taken in both video and peer education will be provided. The control group will be received standard measures. On the morning of angiography anxiety of patients are assessed in intervention and control groups. Data will be analyzed by statistical tests.

Scientific title

The effect of multi-modal education on anxiety in patients undergoing coronary angiography

Public title

The effect of multi-modal education on anxiety in patients undergoing angiography

Purpose

Supportive

Inclusion/Exclusion criteria
Inclusion criteria: Age between 18-80 years; Can read and right; Not be healthcare provider; Lack of Previous angiography; Lack of Participation in the previous similar research project; Lack of mental illness and chronic physical and cognitive disorders; hearing and vision; Lack of using drugs and psychotropic substances; Lack of experience stressful events except current disease during the last 3 months. Exclusion criteria: Reception anti-anxiety medication over a week ago.

Age
From **18 years** old to **80 years** old

Gender
Both

Phase
2

Groups that have been masked
No information

Sample size
Target sample size: **120**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Double blinded

Blinding description

Placebo
Not used

Assignment
Parallel

Other design features
Blinding of study this means that, Both patients as well as researcher from which patients will be assigned to which group do not have any information.
