Comparative effect of local injection of bupivacaine with lidocain and epinephrine composition on post tonsillectomy pain

Protocol summary

Summary

The purpose of this double-blind randomized clinical trial study, is to determine and compare the effect of local injection of bupivacaine and lidocain and epinephrine composition on post tonsillectomy pain. Case study samples, are 4-10 year- old children candidate for tonsillectomy, admitted in ENT ward in Imam Sajjad hospital. Samples with Inclusion criteria, will be chosen non-random and then will be placed in three groups by random blocks allocation and this continue until the samples are complete. Sample size is 29 patients in each group (a total of 87 people). Gathering Information will be done by direct observation, demographic check list and Wong-Baker pain scale. After Ethics committee of Yasuj University of Medical Sciences approval and parents informed consent, all patients will be under similar general anesthesia method. The method of cold knife dissection will be similar in all patients. 5 minutes before the surgical incision, in the first group, 2 ml of bupivacaine 0.125, in the second group 2 ml of 1% lidocaine combined and epinephrine 1: 200,000, will be injected locally in the bed and around the tonsils and tonsillectomy will be done. There is no intervention in Group 3. After surgery and transferring the patients to the ENT ward, pain will be measured 2 hours, 4 hours and 6 hours after surgery with Wong-Baker pain scale.

Scientific title

Comparative effect of local injection of bupivacaine with lidocain and epinephrine composition on post tonsillectomy pain

Public title

The effect of bupivacaine with lidocain and epinephrine composition on the pain in patients undergoing tonsillectomy surgery

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: patient candidate for elective tonsillectomy; children aged 4 to 10 years; consent of the parents; lack of co-morbidities; negative history of surgery; The ability to verbal communication; cognitive and Mental health. Exclusion criteria: metabolic and endocrine diseases; coagulation disorders; mental retardation; positive history of allergy to drugs; pre-tonsillar abscess; hypertension; psychotic disorder; chronic pain; want to withdraw the study; creates complications in patients like bleeding, Late recovery (2 hours post operation); receiving narcotic drug during study; obesity

Age

From **4 years** old to **10 years** old

Intervention groups

1

Description

Intervention group: After induction of anesthesia, cold knife tonsillectomy will be performed. 5 minutes before the surgical incision, in the first group 2 mL of 0.125 bupivacaine, in the second group 2 mL of 1% lidocaine and 1:200,000 epinephrine composition, will be injected locally on the bed and around the tonsils with a single technique as a fan of the upper and lower poles of the tonsils and tonsillectomy will be done. The duration of anesthesia and surgery asses, also patients' vital signs will be recorded before induction of anesthesia, during surgery and in the recovery room. After surgery and transferring the patients of recovery room to the ENT ward, patients' Vital Signs and demographic data collected by check list and pain will be measured 2 hours, 4 hours and 6 hours after surgery with Wong-Baker Pain Scale.
