Investigating The Effect of Group Counseling Based-on Reality Therapy On Sexual Function and Satisfaction in Women

Protocol summary

Summary

The aim of this study is to determine the effectiveness of group counseling based on reality therapy on sexual function and satisfaction in women. This is a randomized clinical trial study that is performed in Arak in 2016. Five health centers are randomly chosen among health centers of Arak. Forty referred women are selected based on inclusion and exclusion criteria. Participants are randomly assigned to the experimental and control groups. Inclusion criteria are: age range 18-45 years; at least one year of marriage is over; having Iranian originality; absence of pregnancy and breastfeeding; absence of drug abuse in couples; absence of history or current medical and mental illness in couples; education not lower than diploma; absence of known sexual dysfunction in couples; absence of specific drug use by couples; absence of infertility in couples; non-use of hormonal methods of contraception. Exclusion criteria are: unwillingness for continue participate in counseling sessions; getting pregnant and occurrence of unpleasant events during the study. Experimental group take part in counseling sessions based on reality therapy (8 sessions, 90 minutes, twice a week) and control group is in waiting list. Data is gathered by personal characteristic form, Female Sexual Function Index (FSFI) questionnaire and Larson Sexual Satisfaction Questionnaire (LSSQ) that are completed before and 4 weeks after intervention by participants.
