Therapeutic effect of oral Gastrografin in the management of postoperative adhesive, partial small-bowel obstruction

Protocol summary

Summary

The purpose of this study is to determine the therapeutic role of oral Gastrografin in cases of small bowel obstruction who did not response to conservative treatments. This is a single arm study, not blinded, without using any placebo, single assignment and interventional. Inclusion criteria: patients older than 16 years hospitalized as adhesive small bowel obstruction. Exclusion criteria: 1) strangulation signs and symptoms. 2) patients younger than 16 years old. 3) patients with documented intra abdominal malignancy, IBD or history of abdominal irradiation. Sample size at least 30 patients. All the patients admitted to Qazvin Velayat hospital in 4 month with adhesive partial small bowel obstruction without any signs and symptoms of strangulation can participate in our study after they sign the permission paper. These patients receive oral gastrografin and evaluate in 48 hours to determine if their signs reduce or improve.
