The effect of "family participation in care" with "data protection" on anxiety of family members of patients in the intensive care unit of the hospital Sajadieh Torbat-e Jam

Protocol summary

Summary

The aim of this study was to compare the effect of family members 'participation in the ICU patient care program with their information support on family members' anxiety. This research is a semi-experimental study with two-group design before and after. 96 family members of ICU patients at Sajadiyeh Hospital, Torbat-e-Jam, were randomly selected and randomly assigned to two groups according to the criteria of entry First, the Spiel Berger Anxiety Inventory is completed. The Clinical Hospital will be on the patient's bedside from the second day of admission to the patient until the seventh day and will participate in the primary health care of the patient. In the information support group, the second day of admission to get acquainted with the department, an educational tour is laid out, then in certain hours of the day during the telephone call his questions are answered. Both groups routinely meet the patient behind the glass in accordance with the hospital policy at the time of the visit. At the end of the seventh day, the questionnaire will be completed by samples. The instrument of this study was demographic information questionnaire and Spiel Berger anxiety inventory
