Comparison of efficacy and safety of chloral hydrate, combination of chloral hydrate - promethazine and combination of chloral hydrate - hydroxyzine in sedation induction for electroencephalography of children

Protocol summary

Summary

In a clinical trial, efficacy and safety of chloral hydrate, combination of chloral hydrate - promethazine and combination of chloral hydrate - hydroxyzine in sedation induction of 90 children 1-7 years old referred to electroencephalography unit, will be evaluated. The patients will randomly be assigned to receive single dose either 40 mg/kg of chloral hydrate or combination 1mg/kg promethazine and 40 mg/kg of chloral hydrate or combination 1mg/kg hydroxyzine and 40 mg/kg of chloral hydrate until Ramsay score of four is attained. Vital signs and adverse effect will be evaluated in children for one hour after drug use. Efficacy of drugs in adequate sedation induction, time to induction of adequate sedation, total stay time in EEG unit, side effects and caregiver's satisfaction are also compared between groups.

Scientific title

Comparison of efficacy and safety of chloral hydrate, combination of chloral hydrate - promethazine and combination of chloral hydrate - hydroxyzine in sedation induction for electroencephalography of children

Public title

chloral hydrate, combination of chloral hydrate - promethazine and combination of chloral hydrate - hydroxyzine in sedation induction for electroencephalography of children

Purpose

Other

Inclusion/Exclusion criteria

Inclusion criteria: 1. Children who are referred to EEG center but don't obey, 2. Age 1-7 years old 3. Class 1 or 2 of ASA Exclusion criteria: 1. Presence of gastritis or any

other serious systemic diseases 2. Severe systemic reaction 3. History of allergy to drug 4. The patient does not use the drug completely

Age

From **1 year** old to **7 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

epilepsy

ICD-10 code

G40, G47

ICD-10 code description

Epilepsy and paroxysmal disorders

Primary outcomes

1

Description

success in recording of EEG

Timepoint

every 15 minutes

Method of measurement

clinical exam

2

Description

adequate sedation (Ramsay score of four is attained)

Timepoint

every 15 minutes

Method of measurement

clinical exam

Secondary outcomes

1

Description

total stay time in EEG unit

Timepoint

every 30 minutes

Method of measurement

asking from parents

2

Description

side effects

Timepoint

every 15 minutes

Method of measurement

clinical exam

3

Description

time to induction of adequate sedation

Timepoint

every 15 minutes

Method of measurement

clinical exam

4

Description

caregiver's satisfaction

Timepoint

after one hour of drug use

Method of measurement

asking from caregiver

Intervention groups

1

Description

combination of 1mg/kg hydroxyzine and 40 mg/kg of chloral hydrate

Category

Treatment - Other
