Comparison of efficacy of amitriptyline and melatonin in prophylaxis of headach in 5-15 year old migraineurs children

Protocol summary

Summary

Migraine is the most important and frequent type of headache in children. Prophylactic therapy should be considered if a child experiences more than two to four severe episodes monthly or is unable to attend school regularly. The purpose of this study is to compare efficacy and safety of amitriptyline and melatonin in prophylaxis of migraine headache in children. In this study , sixty 5-15 year old children with migraine headache whom were referred to pediatric neurology clinic of Shahid Sadoughi University of Medical Sciences and prophylactic therapy indicated in them , are evaluated . The children are distributed into two groups. In both groups, oral drug and in one dose at bed time will be prescribed. In one group , 1mg/kg/day of amitriptyline and in other one , 0.3mg/kg/day of melatonin will be given . Number , severity and disability score of migraine headache and side effects of drugs are to be compared before and three months after treatment .

Scientific title

Comparison of efficacy of amitriptyline and melatonin in prophylaxis of headach in 5-15 year old migraineurs children

Public title

Amitriptyline and melatonin in prophylaxis of of migraine in children

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: 1. children aged 5-15 years 2. Having migraine headache based on International Headache Society Criteria 3. Having frequent (one or more headache attack per week) or disabling (PedMIDAS more than 20) headaches that prophylactic therapy indicated in them . in one month 4. not used any

migraine preventive therapy Exclusion Criteria: 1. History of drug allergy 2. Secondary headaches such as epilepsy or other neurologic disorders 3. Systemic diseases such as asthma, diabetes mellitus , metabolic acidosis , renal stone and hepatic diseases

Age

From **5 years** old to **15 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Migraine headache

ICD-10 code

G43.0

ICD-10 code description

Migraine without aura [common migraine]

Primary outcomes

1

Description

Monthly frequency of headache

Timepoint

before and three months after treatment

Method of measurement

asking from patient

2

Description

severity of headache

Timepoint

before and three months after treatment

Method of measurement

asking from patient

3

Description

duration of headache

Timepoint

before and three months after treatment

Method of measurement

asking from patient

4

Description

Pediatric Migraine Disability score

Timepoint

before and three months after treatment

Method of measurement

asking from patient

Secondary outcomes

1

Description

Side effects

Timepoint

monthly until three months after treatment

Method of measurement

clinical exam and asking from patients

Intervention groups

1

Description

single dose of 1mg/kg/day of amitriptyline at bed time
for three months

Category

Prevention

2

Description

single dose of 0.3mg/kg/day of melatonin at bed time for three months

Category

Prevention
