Comparison of the effects of remifentanyl and dexmedetomidine on recovery profile of patients after hysterectomy operation under anesthesia with venous propofol

Protocol summary

Summary

• Objectives: Comparison of the effects of remifentanyl and dexmedetomidine on recovery profile of patients after hysterectomy operation under anesthesia with venous propofol • Design: patients referring to the Firozgar hospital who are candidate for hysterectomy provided informed consent will be randomly assigned into two groups of dexmedetomidine and remifentanyl. Study is phase 1/2, double-blinded and single center. • Setting and conduct: in this double-blinded randomized clinical trial, patients candidate for hysterectomy will be recruited according to the inclusion and exclusion criteria. All patients will sign informed consent forms. Anesthesia induction will be performed and the patients will receive 1 µg/kg of dexmedetomidine in 15 minutes and then 2 µg/kg/hour in the dexmedetomidine group and remifentanyl 1 µg/kg/minute in the remifentanyl group as infusion until the end of operation. • Participants including major eligibility criteria: patients candidate for elective hysterectomy operation in Firozgar hospital with ASA I-II grade provided informed consent are included. Patients above 70 years of age, emergency operation, patients with cardiopulmonary, renal, hepatic, diabetes, hypertension, obesity, difficult airway, lactating women, sleep apnea and psychological diseases will be excluded. • Intervention: drugs remifentanyl and dexmedetomidine • Main outcome measures: anesthesia and operation duration, ETCO₂, extubation time, recovery time, bradycardia, hypotension and Aledret scale

Scientific title

Comparison of the effects of remifentanyl and dexmedetomidine on recovery profile of patients after

hysterectomy operation under anesthesia with venous propofol

Public title
Comparison of the effects of two anesthetics on recovery profile of patients after hysterectomy operation

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria: patients candidate for elective hysterectomy operation in Firozgar hospital; ASA I-II grade; informed consent Exclusion criteria: patients above 70 years of age; emergency operation; patients with cardiopulmonary disease; renal disease; hepatic disease; diabetes; hypertension; obesity; difficult airway; lactating women; sleep apnea; psychological diseases

Age
From **2 days** old to **70 years** old

Gender
Female

Phase
1-2

Groups that have been masked
No information

Sample size
Target sample size: **50**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Double blinded

Blinding description

Placebo
Used

Assignment
Parallel

Other design features
Patients will be randomly allocated into two groups using block randomization method.

Health conditions studied

1

Description of health condition studied

Hysterectomy

ICD-10 code

Z90.7

ICD-10 code description

Acquired absence of genital organ(s)

Primary outcomes

1

Description

Consciousness

Timepoint

After recovery

Method of measurement

Aldrete questionnaire

Secondary outcomes

1

Description

Hemodynamic parameters

Timepoint

Every two hours from beginning of the operation and after the operation

Method of measurement

Barometer

Intervention groups

1

Description

Intervention group 1: 1 µg/kg of dexmedetomidine in 15 minutes and then 2 µg/kg/hour till the end of operation

Category

Treatment - Drugs

2

Description

Intervention group 2: 1 µg/kg/minute of remifentanyl until end of the operation

Category

Treatment - Drugs
