

Clinical Trial Protocol

Iranian Registry of Clinical Trials

19 Jun 2026

Controlled trial of effectiveness of Acceptance and Commitment Therapy on depression, anxiety, risky decision making, craving and cessation in male smokers.

Protocol summary

Summary

(1) Objectives: This study aims at investigating the effectiveness of acceptance and commitment therapy on smoker's depression, anxiety, risky decision making, craving and cessation at Kashan. (2) Design: This is a pretest-posttest experimental study. The intervention also includes a six-weeks follow-up course. (3) Methods: A sample of 70 eligible male smokers will be recruited. That will be randomly allocated to either the experimental or the control groups. smokers in the experimental group will receive acceptance and commitment therapy while the smokers in the control group will receive Treatment As Usual (TAU) in smoking cessation clinics. Study instruments include the Beck Depression inventory, the Beck Anxiety Inventory, and Iowa gambling test, fagestrom and exhaled CO2 detector. These instruments will be completed before, immediately after, and one month after the intervention. (4) Inclusion Criteria: 1. Having an age of 18–40 years, 2. Having a degree in secondary education or higher, 3. nicotine dependence based on DSM 5 diagnostic criteria. (5) Exclusion criteria: 1. Having a known-cause depression or anxiety following problems such as loss, marital conflicts and divorce, 2. Having a history of psychotic disorders, 3. Receiving psychotherapy or drug therapy during past six months, 4. Unwillingness to continue participating in the study, 5. Failing to participate in more than two sessions of the study intervention 6. Having a history of substance abuse disorders; (6) Intervention: The intervention of this study is acceptance and commitment therapy which includes eight 90-minute sessions. (7) Primary outcomes: The primary outcomes are depression, anxiety, risky decision making, craving and cessation.

Health conditions studied

1

Description of health condition studied

nicotine dependence

ICD-10 code

F17

ICD-10 code description

Mental and behavioural disorders due to use of tobacco

2

Description of health condition studied

depression

ICD-10 code

F32.0

ICD-10 code description

Two or three of the above symptoms are usually present. The patient is usually distressed by these but will probably be able to continue with most activities.

3

Description of health condition studied

anxiety

ICD-10 code

F49.1

ICD-10 code description

Anxiety NOS

Primary outcomes

1

Description

depression

Timepoint

Before intervention, After intervention, One month after intervention

Method of measurement

Beck depression inventory

2

Description

anxiety

Timepoint

Before intervention, After intervention, One month after intervention

Method of measurement

Beck Anxiety Inventory

3

Description

craving(nicotine dependence)

Timepoint

Before intervention, After intervention, One month after intervention

Method of measurement

fagestrom Craving scale

4

Description

Risky decision making

Timepoint

Before intervention, After intervention, One month after intervention

Method of measurement

Iowa gambling test

5

Description

smoking cessation

Timepoint

Before intervention, After intervention, One month after intervention

Method of measurement

Expiratory CO2 concentration

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: This study is conducted to determine the effectiveness of Acceptance and Commitment Therapy (ACT) on depression, anxiety, risky decision making, craving and cessation in male smokers . The aim of this approach is invites people to open up to unpleasant feelings, and learn not to overreact to them, and not avoiding situations where they are invoked. Its

therapeutic effect is a positive spiral where feeling better leads to a better understanding of the truth and also experienced flexible life. this treatment is during the eight 90-minute sessions for two months.

Category

Behavior

2

Description
