Investigating the analgesic effect of magnesium sulfate during postoperative period in patients underwent knee arthroscopic partial meniscectomy

Protocol summary

Summary

This study aims to investigate the analgesic effect of magnesium sulfate during postoperative period in patients underwent knee arthroscopic partial meniscectomy. Inclusion criteria are male or female patients (18 to 45 years old) candidate of knee arthroscopic partial meniscectomy based on the MRI imaging. Exclusion criteria are elevated levels of serum magnesium ($> 1\text{mmol/l}$), known allergies to pharmaceutical agents using in the study, major dysfunction of liver and kidney and cardiovascular system, specific atrioventricular block, obesity and previous treatment with opoidal drugs, rheumatic diseases, ligamental damage of the knee and sever osteoarthritis of the knee. Ninty four patients are randomly divided into two groups (each 47 cases): one control group and one intervention groups. The intervention group receives 20 cc of normal saline containing 1 gr magnesium sulfate 10% after surgery and before opening the tourniquet by the surgeon and with using arthroscopy. The control group receives only 20 cc of normal saline. The primary outcome is assessment of pain based on the visual analogue score (VAS) after surgery in 5, 60, 120 and 240 min after entering the recovery room by researcher who is not aware of grouping.

Health conditions studied

1

Description of health condition studied

Meniscal tears

ICD-10 code

M23.2

ICD-10 code description

Derangement of meniscus due to old tear or injury Old bucket-handle tear

Primary outcomes

1

Description

Pain score (VAS)

Timepoint

5, 60, 120, and 240 min after entering the recovery room

Method of measurement

Visual analogue score

Secondary outcomes

empty

Intervention groups

1

Description

Group intervention: patients receive 20 cc of normal saline containing 1 gr magnesium sulfate 10% in their knees

Category

Treatment - Drugs

2

Description

In control group: patients only receive 20 cc normal saline in their knees

Category

Treatment - Drugs
