Effect of communication skills training on marital satisfaction and mental health among pregnant women

Protocol summary

Summary

Objectives: this study will be conducted to evaluate the effectiveness of teaching communication skills on marital satisfaction and mental health of pregnant women. Design: This quasi-experimental study will be performed in health centers Nawab, Isfahan, on 60 pregnant women with gestational age less than 24 weeks in two intervention and control groups, who had low marital satisfaction. The levels of anxiety, depression and marital satisfaction will be evaluated by using General Health Questionnaire and ENRICH marital satisfaction questionnaires before the start of the program and one and three months after the intervention. The intervention will be included communication skills training according to the needs of pregnant women during pregnancy. Main outcome measures: scores of marital satisfaction, depression, and anxiety will be evaluated in the intervention and control groups at interval of one month and three months after the intervention
