determination of effect of deep-slow and regular breathing on pain intensity after chest tube removal in patients underwent Coronary Artery Bypass Graft (CABG) surgery

Protocol summary

Summary

Objective: determination of effect of deep-slow and regular breathing on pain intensity after chest tube removal in patients underwent Coronary hospitalized in Imam Ali-Design: randomized controlled clinical trial. Setting and conduct: required sample size is 140 patients. Eligible patients will be allocated to one of the two groups of deep-slow and regular breathing and control group by randomization-Inclusion criteria include Consent to participate in the study, age between 25 to 65 years, stable vital signs, The ability to speak and understand the language, conscious of the place, time and person ,No take sedative and analgesic four hours before pulling the chest tube, No history of diabetes, No respiratory infection or infection chest tube, No history of drug addiction, No history of previous chest surgery had a chest tube lateral or bilateral, having at least one chest-Exclusion criteria include Patients who do not continue cooperation until the end of intervention, critically ill patient during the study; death the patient's- Interventions: In order to gather data in both group pain intensity using a visual analog scale, two minutes after dressing removal chest tube will be assessed and after the intervention group be asked, deep-slow and regular breathing for 15 minutes and Control group will receive routine cares. Again pain intensity in both groups using a VAS, 15 minutes after removal of the chest tube, will be assessed by the investigator-The main outcome variables: pain intensity.

I97.1

ICD-10 code description

Other functional disturbances following cardiac surgery

2

Description of health condition studied

pain

ICD-10 code

R52.0

ICD-10 code description

Pain, not elsewhere classified, Acute pain

Primary outcomes

1

Description

pain intensity

Timepoint

Minute 2 and 15 after removal chest tube

Method of measurement

visual analog scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: two minutes after the removal of chest tube , to measure pain intensity, visual analog scale will be given to complete. Then they are asked, 15 minutes of deep, slow and regular breathing, and again to complete the visual analog scale

Category

Other

2

Description

Control group: two minutes after the removal of chest tube , to measure pain intensity, visual analog scale will be given to complete. 15 minutes later, without any intervention (usual care only) again to will be complete the visual analog scale
