Evaluation of Effectiveness of Photodynamic Therapy with Low-level Diode Laser in Nonsurgical Treatment of Peri-implantitis

Protocol summary

Summary

goal: comparison of clinical and microbial periodontal indexes changes using of low level Diode laser with and without Emundo photosensitizer material study design: clinical trail inclusion criteria: 4-6 mm pocket depth and 0.5-2 mm marginal bone loss around dental implant exclusion criteria: patient poor oral hygiene and poor cooperation sample size: 40 implants with primary peri implantitis in 20 patients Periodontal treatment comprising scaling and root planning (SRP) was accomplished for the all mouth and mechanical debridement with fiber carbon curette and air polishing with bicarbonate sodium powder was accomplished around implants. Implants were randomly divided into two groups and treated with LT (control) and PDT (test). the clinical indices were measured at baseline, 6 weeks and 3 months after treatment. Microbiological samples were taken and evaluated at baseline and 3-month follow up. Data were entered in SPSS ver. 20 and analyzed with Friedman, repeated measure of ANOVA and Mann-Whitney tests ($\alpha=0.05$). time: 2014-2015

Scientific title

Evaluation of Effectiveness of Photodynamic Therapy with Low-level Diode Laser in Nonsurgical Treatment of Peri-implantitis

Public title

Evaluation of Effectiveness of Photodynamic Therapy with Low-level Diode Laser in Nonsurgical Treatment of Peri-implantitis

Purpose

Treatment

Inclusion/Exclusion criteria

The inclusion criteria: 1. 4-6 mm pocket depth & 0.5-2 mm marginal bone loss 2. 2mm or more attached gingiva around implant 3. no systemic disease 4. no tobacco use 5. no use of antibiotics and drugs within previous 1month

6.no periodontal treatment except scaling and root planning within previous 2years The exclusion criteria:
1.use of alcohol or tobacco 2.pregnancy or breastfeeding
3. use of antimicrobial agents during the previous 2 months 4. history of periodontal surgery during the previous year. 5. poor oral hygiene and no cooperation 6. need to gingival graft,with out attached gingiva

Age

From **20 years** old to **67 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied

peri-implantitis or inflamatory condition around dental implant

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

probing depth measurement

Timepoint

before intervention/ 3month after intervention

Method of measurement

with periodontal probe/ millimeter

2

Description

papilla bleeding index

Timepoint

before intervention/ 3month after intervention

Method of measurement

index definition/ score to bleeding on probing

3

Description

modified plaque index

Timepoint

before intervention/ 3month after intervention

Method of measurement

index definition/ plaque accumulation rate

4

Description

microbial specimen

Timepoint

before intervention/ 3month after intervention

Method of measurement

microbial culture of crevicular gingival fluid / PCR

Secondary outcomes

empty

Intervention groups

1

Description

intervention group: Periodontal treatment comprising scaling and root planning (SRP) was accomplished for the all mouth and mechanical debridement with fiber carbon curette and air polishing with bicarbonate sodium powder was accomplished around implants. (first treatment phase) oral hygiene instruction (modified bass method) and flossing. (educational intervention) two weeks later Photo Dynamic Therapy applied. (810 nm Diode laser+ Emundo Photosensitizer) and this protocole repeated in two weeks after. *EmonDo: indocyanine green /A.R.C. laser GmbH, Germany *Diode laser:Fox/ A.R.C. laser GmbH, Germany
