

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

Effect of family presence on anxiety of acute coronary syndrome patients at cardiac care unit.

Protocol summary

Summary

This study will be done with the aim of investigating the effect of family presence on anxiety of acute coronary syndrome patients at cardiac care unit. Convenient samples will be used. Inclusion criteria: Acute coronary syndrome patients who are hospitalized for at least three days in cardiac care unit; The patient is alert and awake; Gaining Score higher than 20 according to speilberger questionnaire. Exclusion criteria: Discharging patient less than three days of hospitalization; Cardiopulmonary resuscitation need; Reciving hypnotic except for Alprazolam and Oxazepam; The presence of acute cardiovascular and pulmonary complications during the study. A quasi-experimental study will be started on 60 acute coronary syndrome patients and patients will be divided into two categories, after doing steps of beginning the study and obtaining approval and written consent. Speilberger questionnaire will be used for the level of anxiety evaluation. A member of family who has had close emotional relationship with the patient will be stayed beside him/her for the intervention group, from beginning until third day of hospitalization as well as usual cares. Routine cares without family presence will be done for control group. As the average time of hospitalization in cardiac care unit in this center is 72 hours, the questionnaire will be completed once in a first and the second time in third day of hospitalization. Then the effect of family presence on patient's anxiety will be assessed and compared in both groups.
