Compare the efficacy of aromatherapy with essential oils of lavender and Citrus aurantium on anxiety before laparoscopic surgery In two intervention group and a control group.

Protocol summary

Summary

The aim of this study is to compare the effect of two methods of aromatherapy; Lavender and citrus aurantium essence; on severity of anxiety before undergoing a Laparoscopic cholecystectomy surgery, in which patients, based on inclusion and exclusion criteria, will be divided in three groups; intervention with Lavender essence, citrus aurantium essence, and control. This study is a single-blind clinical trial that will be conducted on 90 patients. Before intervention, patients must fill out Spiel-Berger anxiety-measuring questionnaire to record basic anxiety. the patients who get 20 (minimum mark) will be entered the study. Then in intervention group, we pour two drops of Lavender essence and citrus aurantium essence by a dropper on a piece of tissue and let the patients to smell it for 20 minutes. After that by Spiel-Berger questionnaire, patients' anxiety will be measured, finally, the effects of the essences will be studied.
