The effectiveness of violet syrup on insomnia reduction in patients with obsessive compulsive disorder or depression

Protocol summary

Summary

This double-blinded clinical trial study aims to consider the effect of Violet Syrup on insomnia reduction in patients with depression or obsessive-compulsive disorder in Iran. Insomnia reduction will be considered using the Pittsburgh questionnaire. The inclusion criteria: sleeplessness score more than 5 based on Pittsburgh questionnaire, signs and symptoms of depression and obsessive-compulsive disorder, consent and commitment for participation in the study, consumption of SSIR drug for at least one month, no history of physical illnesses, psychotic psychiatric disorder and generalized anxiety disorder. Exclusion criteria: history of sleep apnea, use of pharmaceutical and non-pharmaceutical treatments for insomnia. The study population includes patients with depression or obsessive-compulsive disorder along with insomnia. A total number of 80 patients with depression (20 patient in Violet Syrup and 20 patient in placebo Syrup) or obsessive-compulsive disorder (20 patient in Violet Syrup and 20 patient in placebo Syrup) will be randomly allocated to the intervention and control groups. In this research, the study subjects and data monitoring committee will be blinded. Patients in the study and control groups will receive Violet Syrup and placebo, respectively. The medication and placebo will not be manufactured by the researcher. Simple randomization of subjects will be provided using a random number table.
