A clinical trial on the effect of ultrasound guidance on local analgesic block of the posterior tibial nerve

Protocol summary

Summary

Objective: to compare the effectiveness of ultrasound guidance in local analgesic block of the posterior tibial nerve. Design: a block-randomized, not blinded clinical trial. Study population: patients requiring posterior tibial nerve blocks. Inclusion criteria: age over 18 years, isolated trauma in posterior tibial nerve, and lack of previous ankle deformity. Exclusion criteria: multiple trauma, ankle injury, and previous history of consumption of analgesics. Sample size: 80 cases. Study intervention: the control group received the common methods (i.e., anatomical landmarks) for posterior tibial nerve block. On the other hand, the intervention group was administered posterior tibial nerve blocks using ultrasound guidance. In this method, the anesthetic drug was injected near the nerve causing pain. Study outcome: evaluation and comparison of anesthesia level and duration based on Visual Analogue Scale and Quality Block (i.e., sensory and motor block), based on cold and pinprick, 15 and 30 minutes after the intervention in both the intervention and control groups.

Health conditions studied**1****Description of health condition studied**

Injury of nerves at ankle

ICD-10 code

S94

ICD-10 code description

Injury of nerves at ankle and foot level

Primary outcomes**1****Description**

Pain

Timepoint

15 and 30 minutes after intervention

Method of measurement

Based on Visual Analogue Scale (VAS)

2**Description**

Analgesic duration

Timepoint

After intervention

Method of measurement

Minutes

Secondary outcomes**1****Description**

Quality of nerve blocks (i.e., sensory and motor block)

Timepoint

15 and 30 minutes after intervention

Method of measurement

Physical examination

Intervention groups**1****Description**

The intervention group: Who was administered posterior tibial nerve blocks using ultrasound guidance. In this method, the anesthetic drug is injected near the nerve, causing pain.

Category

Treatment - Other

2**Description**

The control group: Who received the common methods (i.e., anatomical landmarks) for posterior tibial nerve block.
