The Effect of Life Skills' Education on Children's Mental Health of Well-being Faster care Centers

Protocol summary

Summary

The present research aims to study the effect of education of life skills on mental health of girls aged between 14 and 18 years old in well-being faster care center of Kerman. Statistical population of the applied research (with pre- and posttest) includes all girls aged between 14 and 18 years in well-being faster care center of Kerman in academic years 2015-2016. They were 45 individuals. Since continuous presence of children was essential in all educational sessions and only 30 girls could participate in all sessions, all girls were chosen as samples. The testing group learned life skills within 10 sessions for 90 minutes. Concerning results, the education of life skills has been significantly effective on mental health of girls in well-being faster care center. in addition to the effect of education of life skills on mental health, such education has the most positive effect on signs of anxiety and sleep disorder and it has the least positive effect on physical signs.
