Comparison Of The Effects Of Intravenous Metoclopramide And Ondansetron On Prevention Of Nausea And Vomiting After Cesarean Section

Protocol summary

Study aim

Comparison Of The Effect Of Ondansetron And Metoclopramide On Nausea And Vomiting Control After Cesarean Section

Design

In this research, 120 pregnant women were chosen purposefully and randomly allocated into two intervention and control groups.

Settings and conduct

The Present Study Was A Clinical Trial On Women Aged 18 to 40 Years Who Were Candidates For Elective Cesarean Section And Referred To Amiralmomenin Hospital In Zabol. A Total Of 120 Mothers Were Randomly Divided Into Two Groups Of 60 Subjects Receiving Ondansetron or Metoclopramide.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Women With Singleton Pregnancy; Class 1 Or 2 in ASA Grading; No Prohibition Of Spinal Anesthesia. Exclusion criteria: history of narcotic use; being under anti-nausea treatment; having Gestational Hypertension Within One Week Before Surgery.

Intervention groups

The intervention group included 60 pregnant women underwent cesarean surgery and received Ondansetron 4 milligram, single dose, via infusion. The Control group included 60 pregnant women underwent cesarean surgery and received Methoclopramide 10 milligram, single dose, via infusion.

Main outcome variables

Nausea and vomiting after cesarean section.

Scientific title

Comparison Of The Effects Of Intravenous Metoclopramide And Ondansetron On Prevention Of

Nausea And Vomiting After Cesarean Section		Vice chancellor for research, Educational Complex of Zabol University of Medical Sciences, Rajaee Ave	
Public title	Comparison Of The Effects Of Intravenous Metoclopramide And Ondansetron On Prevention Of Nausea And Vomiting After Cesarean Section	City	Zabol
Purpose	Treatment	Province	Sistan-va-Balouchestan
Inclusion/Exclusion criteria		Postal code	9951645984
Inclusion criteria:	Pregnant women who were undergoing elective cesarean section at the Amir-Almomenin hospital in Zabol Women aged 18-40 years	Approval date	2016-12-14, 1395/09/24
Exclusion criteria:	History Of severe Nausea and Vomiting History Of Severe Dizziness In The Car (motion sickness) History Of Drug Use No Anti-Nausea Medicine use high blood pressure in pregnancy	Ethics committee reference number	zbmu.1.REC.1395.88
Age	From 15 years old to 50 years old	Health conditions studied	
Gender	Female	1	
Phase	3	Description of health condition studied	
Groups that have been masked	- Participant - Investigator	ICD-10 code	
Sample size	Target sample size: 120	ICD-10 code description	
Randomization (investigator's opinion)	Randomized	Nausea and vomiting	
Randomization description	Randomization method: Simple random sampling Randomization unit: individual randomization tool: sealed envelope	1	
Blinding (investigator's opinion)	Double blinded	Description	
Blinding description	Ondansetron and Metoclopramide were put in sealed pockets and they were uncovered and the drugs were injected by a technician and therefore patients, researchers and outcome evaluators were blind.	Nausea And Vomiting	
Placebo	Not used	Timepoint	
Assignment	Parallel	Immediately after the intervention, six hours after the intervention, 12 hours after the intervention, 18 hours after the intervention and 24 hours after the intervention.	
Other design features		Method of measurement	
Secondary Ids	empty	Questionnaire	
Ethics committees		Secondary outcomes	
1		1	
Ethics committee		Description	
Name of ethics committee	Ethics committee of Zabol University of Medical Sciences	Timepoint	
Street address		Every six hours	
		Method of measurement	
		Direct observation by technician and asking from the patient	
		Intervention groups	
		1	
		Description	
		Intervention group: Ondansetron (produced by Abidi Company) 4 mg in 10 cc normal saline was Infused before surgery.	
		Category	
		Treatment - Drugs	

2

Description

Control group (routine treatment): Methoclopramide (produced by Abidi Company) 10 mg in 10 cc normal saline was infused before surgery

Category

Treatment - Drugs
