Clinical trial of the effect of melatonin supplementation compared with the placebo on hormonal profiles, inflammatory factors, oxidative stress biomarkers and gene expression related to inflammation in women with polycystic ovary syndrome

Protocol summary

Study aim

Objective: The aim of this study is to determine the effects of melatonin supplementation on hormonal profiles, inflammatory factors, oxidative stress biomarkers and gene expression related to inflammation in patients with polycystic ovary syndrome.

Design

Study design: Randomized double-blind placebo-controlled trial. Randomization will be done by the use of computer-generated random numbers. Patients will be assigned into two groups to receive supplements (n=30) or placebo (n=30).

Settings and conduct

Among patients with polycystic ovary syndrome referred to Kosar outpatient Clinic affiliated to Arak University of Medical Sciences, 60 patients will be selected according to inclusion and exclusion criteria. Participants, investigators or the assessors of the outcomes are unaware of the study groups. Supplements and placebos are similar in shape and size. Fasting blood samples will be taken at baseline and 12 weeks after the intervention. At the beginning and the end of the intervention: 12 weeks.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with polycystic ovary syndrome aged 18 to 40 years. Exclusion criteria: Pregnancy, breastfeeding, patients with sleeping disorders, adrenal hyperplasia, androgen-secreting tumors, hyperprolactinemia, thyroid dysfunction and/or diabetes.

Intervention groups

Intervention group: 10 mg melatonin (Zahravi Pharmaceutical Company, Tabriz, Iran) daily for 12 weeks orally. Control group: Placebo (Barij Essence, Kashan, Iran), daily for 12 weeks orally.

Main outcome variables

Outcomes: Malondialdehyde (primary outcome) and hormonal profiles, inflammatory factors and gene expression related to inflammation (secondary outcome) will be quantified at study baseline and end-of-trial.

Scientific title
 Clinical trial of the effect of melatonin supplementation compared with the placebo on hormonal profiles, inflammatory factors, oxidative stress biomarkers and gene expression related to inflammation in women with polycystic ovary syndrome

Public title
 Effect of melatonin supplementation in treatment of women with polycystic ovary syndrome

Purpose
 Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Patients with polycystic ovary syndrome aged 18 to 40 years
Exclusion criteria:
 Pregnancy Breastfeeding Patients with sleeping disorders
 Adrenal hyperplasia Androgen-secreting tumors
 Hyperprolactinemia Thyroid dysfunction and/or diabetes

Age
 From **18 years** old to **40 years** old

Gender
 Female

Phase
 N/A

Groups that have been masked

- Participant
- Investigator
- Outcome assessor

Sample size
 Target sample size: **60**

Randomization (investigator's opinion)
 Randomized

Randomization description
 To decrease potential confounding effects, after balanced randomisation, participants will be allocated into two treatment groups to take either supplements or placebo. Randomization will be done by the use of computer software.

Blinding (investigator's opinion)
 Double blinded

Blinding description
 Participants, investigators or the assessors of the outcomes are unaware of the study groups.

Placebo
