The impact of group anger control training and communication skills on the aggression male addicts referring to addiction centers

Protocol summary

Summary

This study is an interventional study. The goal of study is determining the effect of group anger control training and communication skills on male addicted aggression. Inclusion criteria inclusion, male patients are leaving the opium drug, and exclusion criteria are, men less than 15 years old; Absence of more than 2 sessions in the curriculum. The population of the study is the patients referring to addiction treatment centers affiliated to Kerman University of Medical Sciences. The sample size is, 100 opium drug addicts whose scores of aggression questionnaire are above 80, and randomly are divided, two experimental groups and one control group (each group of 33 people). The intervention is patient education. The duration of the study is 6 months(onset:2017-08-01). Before the training, aggression questionnaire is given to all three groups. Then an experimental group is placed under anger management training and another experimental group, under communication skills training for 8 sessions of 60 minutes, and the control group does not receive any training. After the training sessions, the aggression questionnaire is completed by all three groups. The outcome of this research is the effect of training on the degree of aggression in patients.
