

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

To investigate the effect of using pacifier and mother's finger, two ways of non-nutritive sucking, during gavage on physiological parameters in preterm neonates.

Protocol summary

Summary

It was a quasi-experimental study which were done in university hospitals having NICU i Tehran, Iran. Sampling method was continuous. Informed consent was obtained from parents after the nature of study was explained. Due to the number of samples required, infants were enrolled. Once the infant was getting out of NPO, gavage started with breast milk. All infants were in stable and awake state. NNS with mother's finger (already receiving instructions about hand-wash) putting on hypoallergenic disposable gloves started; before, during and after feeding with NGT, on a certain time. Then pulse rate and o2 saturation were recorded of monitor connected to infant. For next time feeding infant received NNS with pacifier and the other feeding gavage were done without any interventions. This recording continued for 4 days. NNS started 5 min before feeding until 5 min after feeding. For all samples breast-milk was used for feeding.

Scientific title

To investigate the effect of using pacifier and mother's finger, two ways of non-nutritive sucking, during gavage on physiological parameters in preterm neonates.

Public title

To investigate the effect of using pacifier and mother's finger on physiological parameters in preterms.

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: gestational age of birth 34 to 37 weeks; stable hemodynamic state; breastfeeding; no need to respiratory support; not having apnea events; not receiving analgesic drugs. Exclusion criteria: having metabolic disorders; genetic syndromes; abnormalities in

mouth movements; cognitive disorders; neurological disorders; oral and palatal disorders; sudden changes in physiological parameters; change of milk type.

Age

From **1 day** old to **1 month** old

Health conditions studied

1

Description of health condition studied

Effect of non nutritive sucking on physiological parameters

ICD-10 code

P05-P08

ICD-10 code description

Disorders of newborn related to length of gestation and fetal growth

Primary outcomes

1

Description

Heart rate

Timepoint

5 min before gavage, during gavage, 5 min after gavage

Method of measurement

Monitoring

2

Description

Oxygen saturation

Timepoint

5 min before gavage, during gavage, 5 min after gavage

Method of measurement

Monitoring

Secondary outcomes

1

Description

Tachycardia

Timepoint

During intervention

Method of measurement

Monitoring

2

Description

Reduction in oxygen saturation

Timepoint

During intervention

Method of measurement

Monitoring

Intervention groups

1

Description

This intervention is on preterm infants; sing mother's finger and pacifier during feeding with NGTube and during third feeding no intervention is used for infant.
