Comparison of the three treatment methods, single miniplate, double miniplates and 3D miniplate for open reduction of mandibular angle fracture

Protocol summary

Summary

This study is a prospective and randomized double-blind clinical trial. The aim of this study is to compare of the three treatment methods, single miniplate, double miniplates and 3D miniplate for open reduction of mandibular angle fracture. Total of sample size is 45 patients. The patients with infection before surgery, comminuted fracture and with immune deficiency will be excluded. The patients are randomly divided into three groups. The patients do not know about the protocol of the study and type of categories and evaluation of patients is performed by person who does not know about the protocol of the study. All the patients are under general anesthesia. First group is undergoing osteosynthesis by using single 2 mm miniplate with common Champy technique. Second group is undergoing osteosynthesis by using two 2 mm miniplate. Third group is undergoing osteosynthesis by using single 3D miniplate. The amount of hemoglobin and hematocrit levels in patients is recorded before and after surgery in both groups by sampling blood. The amount of blood loss is calculated with subtracting preoperative and postoperative hemoglobin and hematocrit levels in blood. Patients do not use any medications before surgery. The temperature and the amount of body fluids can be controlled precisely by the anesthesiologist. Panoramic X-ray and facial CT scan will be recorded before and after surgery and six months after surgery.

Scientific title

Comparison of the three treatment methods, single miniplate, double miniplates and 3D miniplate for open reduction of mandibular angle fracture

Public title

Comparison of three methods of treatment by using plate in the treatment of mandibular fracture

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion Criteria: Patients with unilateral or bilateral fracture of the mandible angle. Exclusion Criteria: infection before surgery; Patients with immunodeficiency; Patients with comminuted fracture; Dissatisfaction.

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 45

Health conditions studied

1

Description of health condition studied

Fracture of mandible

ICD-10 code

S02.6

ICD-10 code description

Fracture of mandible

Primary outcomes

1

Description

Bone healing and bone density analysis

Timepoint

Before and after the surgery and six months after surgery

Method of measurement

Panoramic radiography

2

Description

Pairing fracture fragments

Timepoint

Before and after the surgery and six months after surgery

Method of measurement

Facial CT scan

Secondary outcomes

1

Description

Palpability of the implants

Timepoint

Six months after surgery

Method of measurement

Questions from patient and touch the face

2

Description

Infection

Timepoint

Six months after surgery

Method of measurement

Observation and blood tests

Intervention groups

1

Description

Group I (control group): Osteosynthesis surgical of patients by using the single 2 mm miniplate with common Champy technique.

Category

Treatment - Surgery

2

Description

Osteosynthesis surgical of patients by using the two 2

mm miniplate.

Category

Treatment - Surgery

3

Description

Group III (intervention group): Osteosynthesis surgical of patients by using the single 3D miniplate.

Category

Treatment - Surgery
