Clinical Trial Protocol
Iranian Registry of Clinical Trials

03 Aug 2026

Effect of Calcitriol supplementation on the severity of fatty liver, inflammatory and metabolic biomarkers in patients with non-alcoholic fatty liver with different genotypes of vitamin D receptor

Protocol summary

Study aim

Evaluation of the effects of calcitriol administration on clinical and laboratory parameters in Non-Alcoholic Fatty Liver patients with different genotypes of vitamin D receptor FOK-I polymorphisms

Design

Two arm parallel group double-blind randomised trial with concealed randomization

Settings and conduct

Patients with non-alcoholic fatty liver disease (NAFLD) are recruited from Ahvaz Golestan hospital according to the inclusion/exclusion criteria and receiving the intervention or placebo for 16 weeks following random concealed allocation to the two groups. Participants, healthcare providers (Physicians and nurses) who care for participants during the trial, data collectors, outcome assessors, statistical analyzers and manuscript writers who are involved in our study are blinded.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age between 18- 60 years; the presence of NAFLD diagnosed by Fibroscan elastography; increased alanine transaminase (> 40 U/L); BMI below 35. Exclusion criteria: Alcohol consumption greater than 20 g per day; pregnancy; lactation; viral or autoimmune hepatitis; hereditary hemochromatosis; Wilson's disease; α1-antitripsin deficiency; malabsorption syndromes; consumption of hepatotoxic drugs; high doses of synthetic estrogens; a history of hypothyroidism and Cushing's syndrome; Serum calcium greater than 10.6 mg/dl; a history of kidney stones; renal failure; intake of vitamin D, vitamin E and calcium supplements during last 3 months.

Intervention groups

Patients with non-alcoholic fatty liver disease (NAFLD) receiving calcitriol or placebo following random allocation

Main outcome variables

Serum levels of liver enzymes; levels of hepatic steatosis

Scientific title
Effect of Calcitriol supplementation on the severity of fatty liver, inflammatory and metabolic biomarkers in patients with non-alcoholic fatty liver with different genotypes of vitamin D receptor

Public title
Calcitriol supplementation in Nonalcoholic Fatty Liver Disease

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Age between 18- 60 years Presence of NAFLD diagnosed by Fibroscan elastography Increased alanine transaminase (> 40 U/L) BMI below 35

Exclusion criteria:
Alcohol consumption greater than 20 g per day pregnancy; lactation viral or autoimmune hepatitis hereditary hemochromatosis Wilson's disease α1-antitripsin deficiency malabsorption syndromes consumption of hepatotoxic drugs high doses of synthetic estrogens hypothyroidism and Cushing's syndrome Serum calcium greater than 10.6 mg/dl history of kidney stones; renal failure intake of vitamin D, vitamin E and calcium supplements

Age
From **18 years** old to **60 years** old

Gender
Both

Phase
3

Groups that have been masked
No information

Sample size
Target sample size: **160**

Randomization (investigator's opinion)
Randomized

Randomization description
Block randomization with blocks of size 6 and random allocation to the blocks and allocation concealment was carried out using A and B codes

Blinding (investigator's opinion)
Double blinded

Blinding description
Participants, healthcare providers (Physicians and nurses) who care for participants during the trial, data collectors, outcome assessors, statistical analyzers and manuscript writers who are involved in our study are blinded.

Placebo
Used

Assignment
Parallel

Other design features

Secondary Ids

empty

Ethics committees

1

Ethics committee

Name of ethics committee
Ethics committee of Ahvaz Jundishapur University of Medical Sciences

Street address
Golestan Blvd., Ahvaz, Iran

City
Ahvaz

Province
Khouzestan

Postal code
61357-15794

Approval date
2017-05-23, 1396/03/02

Ethics committee reference number
IR.AJUMS.REC.1396.161

Health conditions studied

1

Description of health condition studied
Non-Alcoholic Fatty Liver disease (NAFLD)

ICD-10 code
K76.0

ICD-10 code description
Fatty (change of) liver, not elsewhere classified

Primary outcomes

1

Description
Liver enzymes

Timepoint
Before and after 16 weeks calcitriol treatment

Method of measurement
Activity assay of enzymes in serum

Secondary outcomes

1

Description
Hepatic Steatosis

Timepoint
Before and after 16 weeks of calcitriol treatment

Method of measurement
Fibroscan elastography and enzymatic assay of glyceamic and lipid parameters in serum

2

Description
High sensitive C-reactive protein (hs-CRP)

Timepoint
Before and after 16 weeks of calcitriol treatment

Method of measurement
Enzyme-linked immunosorbent assay

3

Description
Total adiponectin
Timepoint
Before and after 16 weeks of calcitriol treatment
Method of measurement
Enzyme-linked immunosorbent assay

4

Description
Serum leptin
Timepoint
Before and after 16 weeks of calcitriol treatment
Method of measurement
Enzyme-linked immunosorbent assay

5

Description
Glycemic profile
Timepoint
Before and after 16 weeks of calcitriol treatment
Method of measurement
By measuring fasting serum glucose and insulin

6

Description
Lipid profile
Timepoint
Before and after 16 weeks of calcitriol treatment
Method of measurement
By enzymatic measurement of fasting serum triglyceride, cholesterol, HDL and LDL

Intervention groups

1

Description
0.25 µg/day calcitriol for 16 weeks
Category
Treatment - Drugs

2

Description
Calcitriol placebo
Category
Placebo
