### The effect of topical formulation containing egg whites on healing of second degree wound in burn patients

#### Protocol summary

##### Summary

The present study is a triangular clinical trial with the aim of determining the effect of topical formulation of egg whites on the improvement of second-degree burn wounds. In this study, the research environment of Taleghani Hospital in Ahvaz is located in Ahvaz, Iran. The study population includes all male and female patients with confirmed diagnosis of grade II burns. The sample size is estimated on the basis of statistical calculations of 90 people who are randomly assigned to two groups (45 persons). Intervention and control are assigned. The therapeutic protocol is this. Second degree ocular lesions, the blister is completely intact, remains intact in the second degree wound, which is usually blotted out, after removing the blisters and dead tissues, and after Daily rinses with normal saline, exposed to air for 5 minutes, to dry. Then, 1% silver sulfadiazine silver ointment is placed on the wound by a sterile abscess of 5 mm size. After 1 hour, without wound healing in the intervention group, a sterile abscess of 5 mm formulation Place the egg white on the wound and dressing. And in the control group, we rub and place the placebo on the wound with a sterile abscess of about 5 milligrams of the placebo.

burn wound

**Timepoint**

The first day / seven days / fifteenth day

**Method of measurement**

To measure wound plastic tape will be used, which is accurate to about 1: 1000 is. The admission to the clinic (first day) and during treatment seventh day and the fifteenth day, the extent of the wound by contact with a tape measure and guide the measurement of transparent measurement and the basis Length Width expressed, and Jensen wound assessment tool Bts- using parameters that are related to the extent of burn wound, the wound (ulcer depth), the edge of the wound, the destruction of underlying tissue, necrotic tissue, necrotic tissue, exudate, the exudate, color of the skin around the wound, peripheral tissue induration, edema peripheral tissues, tissue granulation and epithelialization by the researchers analyzed tissue M And according to points earned from it will be examined wound healing.
