clinical effectiveness of functional training versus strengthening exercise on pain and function in people with patellofemoral pain syndrome

Protocol summary

Summary

Objective: To investigate the effectiveness of functional training versus strengthening exercise on pain and function in people with patellofemoral pain syndrome
Design of study: Double blind randomized controlled clinical trial
Subjects: People with patellofemoral pain syndrome
Inclusion criteria: Subjects of 18-45 y age; insidious onset of symptoms not related to trauma; peripatellar or retropatellar knee pain during at least 2 of activities of stair climbing, hopping, running, squatting, kneeling and prolonged sitting; presence of pain at least 4 weeks; presence of pain at least 30 minutes per day most days of week; pain with compression on the patella; pain on palpation of patellar facet; pain level 3 of a 10-cm visual analog scale
Exclusion criteria: Meniscal, ligamentous or cartilage injury; patellar tendon, iliotibial band or pesanserine tenderness; evidence of effusion; hip or lumbar referred pain; history of recurrent patellar subluxation or dislocation; patellar fracture; prolonged use of anti inflammatory drug or corticosteroid; history of head injury or vestibular disorder within the last 6 months; pregnancy; trauma to knee joint; history of lower extremity surgery; osgood-schlatter or sinding-larsen-johanssen syndromes
sample size: 30 subjects with patellofemoral pain syndrome
Interventions: The subjects is randomly assigned to strengthening exercise group and functional training group
main outcome measures: pain, subjective and objective function is measured before and after intervention. pain intensity is quantified using a 10-cm visual analog scale, subjective function is assessed using kujala patellofemoral scale and objective function is also examined using performance functional tests

Scientific title

clinical effectiveness of functional training versus strengthening exercise on pain and function in people with patellofemoral pain syndrome

Public title

The influence of exercise on pain and function in people with knee pain

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: subjects 18-45 y age; insidious onset of symptoms not related to trauma; peripatellar or retropatellar knee pain during at least 2 of activities of stair climbing, hopping, running, squatting, kneeling and prolonged sitting; presence of pain at least 4 weeks; presense of pain at least 30 minutes per day most days of week; pain with compression on the patella; pain on palpation of patellar facets; pain level 3 of a 10-cm visual analog scale Exclusion criteria: meniscal, ligamentus or cartilage injury; patellar tendon, ilotibial band or pesanserine tenderness; evidence of effusion; hip or lumbar referred pain; history of recurrent patellar subluxation or dislocation; patellar fracture; prolonged use of anti inflammatory drug or corticosteroid; history of head injury or vestibular disorder within the last 6 months; pregnancy; trauma to knee joint; history of lower extremity surgery; osgood-schlatter or sinding-larsen-johanssen syndromes

Health conditions studied**1****Description of health condition studied**

patellofemoral pain syndrome

ICD-10 code

M22.8

ICD-10 code description

other disorders of patella

Primary outcomes**1****Description**

pain

Timepoint

before and after intervention

Method of measurement

visual analog scale

2**Description**

subjective function

Timepoint

before and after intervention

Method of measurement

kujala scale

3**Description**

objective function

Timepoint

before and after intervettion

Method of measurement

performance functional test

Secondary outcomes

empty

Intervention groups**1****Description**

intervention 1: hip and knee strengthening exercise
include strengthening of quadriceps muscle and
abductor and external rotator hip muscles

Category

Treatment - Other

2

Description

intervention 2: functional training include fast walking, ascending and descending of stair platform, ascending and descending on ramp,lateral step down and single leg anterior reach task
