Randomization (investigator's opinion)

Randomized

Randomization description

The present study is a quasi-experimental study with two groups of intervention and control (54 people) and pre-test, post-test. It is done in a simple random manner and available samples that are selected based on the criteria for entering the study. Selection of the research unit based on the criteria of entry and exit was available and divided into two groups randomly through a random number table. Each group has one or two code assigned to each of the groups and assigned to each research unit two-digit code. Then in the random numbers table, the first random number selected for the first group was the second random number selected for the second group. In

each group, on the first day, the researcher, while introducing himself and a brief description of the research after obtaining informed consent, completed the questionnaire of the pre-test personal characteristics of the qualified individuals including the completion of the questionnaires.
